## FACSIMILE

## MODEL UX-B700 FO-B1600

MODEL	SELECTION CODE	DESTINATION
UX-B700 FO-B1600	U	U.S.A.

### CONTENTS

#### CHAPTER 1. GENERAL DESCRIPTION

- [1] Specifications ..... 1-1
- [2] Operation panel ..... 1-2
- [3] Transmittable documents ..... 1-3
- [4] Installation ..... 1-4
- [5] Quick setup guide ..... 1-9
- [6] Quick reference guide ..... 1-10

#### CHAPTER 2. ADJUSTMENTS

- [1] Adjustments ..... 2-1
- [2] Diagnostics and service soft switch ..... 2-3
- [3] Troubleshooting ..... 2-25
- [4] Error code table ..... 2-26

#### CHAPTER 3. MECHANISM BLOCKS

- [1] General description ..... 3-1
- [2] Ink jet printer ..... 3-3
- [3] Disassembly and assembly procedures ..... 3-6

#### CHAPTER 4. DIAGRAMS

- [1] Block diagram ..... 4-1
- [2] Wiring diagram ..... 4-2
- [3] Point-to-point diagram ..... 4-3

#### CHAPTER 5. CIRCUIT DESCRIPTION

- [1] Circuit description ..... 5-1
- [2] Circuit description of control PWB ..... 5-2
- [3] Circuit description of TEL/LIU PWB ..... 5-13
- [4] Circuit description of printer PWB ..... 5-15
- [5] Circuit description of power supply PWB ..... 5-18
- [6] Circuit description of CIS unit ..... 5-18

#### CHAPTER 6. CIRCUIT SCHEMATICS AND PARTS LAYOUT

- [1] Control PWB circuit ..... 6-1
- [2] TEL/LIU PWB circuit ..... 6-10
- [3] Printer PWB circuit ..... 6-14
- [4] Power supply PWB circuit ..... 6-20
- [5] Operation panel PWB circuit ..... 6-22
- [6] Ink PWB circuit ..... 6-24

#### CHAPTER 7. OPERATION FLOWCHART

- [1] Protocol ..... 7-1
- [2] Power on sequence ..... 7-2

#### CHAPTER 8. OTHERS

- [1] Service tools ..... 8-1
  - [2] Changing the record paper size ..... 8-6
  - [3] Rewriting version up the FLASH ROM ..... 8-7
- PARTS GUIDE

Parts marked with "⚠" are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

#### CAUTION FOR BATTERY REPLACEMENT

(Danish)

ADVARSEL !

Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering.  
Udskiftning må kun ske med batteri af samme fabrikat og type.  
Levér det brugte batteri tilbage til leverandoren.

(English)

Caution !

Danger of explosion if battery is incorrectly replaced.  
Replace only with the same or equivalent type  
recommended by the equipment manufacturer.  
Discard used batteries according to manufacturer's  
instructions.

(Finnish)

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.  
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan  
tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden  
mukaisesti.

(French)

ATTENTION

Il y a danger d'explosion s' il y a remplacement incorrect  
de la batterie. Remplacer uniquement avec une batterie du  
même type ou d'un type recommandé par le constructeur.  
Mettre au rebut les batteries usagées conformément aux  
instructions du fabricant.

(Swedish)

VARNING

Explosionsfare vid felaktigt batteribyte.  
Använd samma batterityp eller en ekvivalent  
typ som rekommenderas av apparattillverkaren.  
Kassera använt batteri enligt fabrikantens  
instruktion.

(German)

Achtung

Explosionsgefahr bei Verwendung inkorrektter Batterien.  
Als Ersatzbatterien dürfen nur Batterien vom gleichen Typ oder  
vom Hersteller empfohlene Batterien verwendet werden.  
Entsorgung der gebrauchten Batterien nur nach den vom  
Hersteller angegebenen Anweisungen.

# CHAPTER 1. GENERAL DESCRIPTION

## [1] Specifications

<b>Automatic dialing:</b>	<b>Rapid Key Dialing:</b> 18 numbers <b>Speed Dialing:</b> 81 numbers	<b>Paper tray capacity:</b>	Letter: Approx. 200 sheets (20-lb. copier paper at room temperature; maximum stack height should not be higher than the line on the tray) Legal: 100 sheets Recommended paper weight: 20-lb. Copy Bond
<b>Print cartridge:</b>	Initial cartridge Approx. yield 300 letter pages at 4% coverage* Replacement cartridge: SHARP UX-C70B Approx. yield 600 letter pages at 4% coverage*	<b>Compatibility:</b>	ITU-T (CCITT) G3 mode
<b>Memory size**:</b>	1.8 MB (approx. 100 average pages)	<b>Input document size:</b>	<b>Automatic feeding:</b> Width: 5.8 to 8.5" (148 to 216 mm) Length (20 pages): 5.5 to 11" (140 to 279 mm) Length (5 pages): 5.5 to 14" (140 to 356 mm) <b>Manual feeding:</b> Width: 5.8 to 8.5" (148 to 216 mm) Length: 5.5 to 23.6" (140 to 600 mm)
<b>Modem speed:</b>	14,400 bps with auto fallback to lower speeds.	<b>Effective scanning width:</b>	8.3" (210 mm) max.
<b>Transmission time**:</b>	Approx. 6 seconds (only when ECM is on)	<b>Effective printing width:</b>	8.0" (203 mm) max.
<b>Scanning Resolution:</b>	<b>Horizontal:</b> 203 lines/inch (8 lines/mm) <b>Vertical:</b> Standard: 98 lines/inch (3.85 lines/mm) Fine /Halftone: 196 lines/inch (7.7 lines/mm) Super fine: 391 lines/inch (15.4 lines/mm)	<b>Contrast control:</b>	Automatic/Dark selectable
<b>Print resolution:</b>	600 x 600 dpi	<b>Reception modes:</b>	TEL/FAX/AM
<b>Automatic document feeder:</b>	Letter/A4: 20 pages max. (20-lb. paper) Legal: 5 pages max.	<b>Copy function:</b>	Single/Multi/Sort (99 copies/page)
<b>Recording system:</b>	Thermal inkjet	<b>Telephone function:</b>	Yes (cannot be used if power fails)
<b>Halftone (grayscale):</b>	64 levels	<b>Applicable telephone line:</b>	Public switched telephone network
<b>Compression scheme:</b>	MR, MH, MMR	<b>Display:</b>	16-digit LCD display
		<b>Power requirements:</b>	120 V AC, 60 Hz
		<b>Operating temperature:</b>	60 - 90°F (15 - 32°C)
		<b>Humidity:</b>	25 - 80% RH
		<b>Power consumption:</b>	Standby: 5.0 W Maximum: 30 W
		<b>Dimensions (without attachments):</b>	Width: 14.6" (372 mm) Depth: 10.2" (259 mm) Height: 8.0" (203 mm)
		<b>Weight (without attachments):</b>	Approx. 11 lbs. (5.0 kg)

\* When Ink Save mode is enabled.

\*\* Based on Sharp Standard No. 1 Chart at standard resolution, excluding time for protocol signals (i.e., ITU-T phase C time only).

As a part of our policy of continuous improvement, SHARP reserves the right to make design and specification changes for product improvement without prior notice. The performance specification figures indicated are nominal values of production units. There may be some deviation from these values in individual units.

## [2] Operation panel

Illustration: UX-B700U

### 1. Display

This displays messages and prompts to help you operate the machine.

### 2. FUNCTION key

Press this key followed by the arrow keys to select special functions and settings.

### 3. RESOLUTION / RECEPTION MODE key

When a document is in the feeder, press this key to adjust the resolution for faxing or copying. At any other time, press this key to select the reception mode (an arrow in the display will point to the currently selected reception mode).

### 4. Rapid Dial Keys

Press one of these keys to dial a fax number automatically.

### 5. Number keys

Use these keys to dial numbers, and enter numbers and letters when storing auto-dial numbers.

### 6. SPEED DIAL key

Press this key to dial a fax or voice number using an abbreviated 2-digit Speed Dial number.

### 7. SPEAKER key

Press this key to listen to the line and fax tones through the speaker when faxing a document.

Note: **This is not a speakerphone.** You must pick up the handset to talk with the other party.

### 8. HOLD key

Press this key to put the other party on hold during a phone conversation. When this is done, they cannot hear you. You can put the handset back in the cradle without breaking the connection. When you are ready to speak with the other party again, pick up the handset. If you did not put the handset back in the cradle, press the **HOLD** key again to resume conversation.

### 9. PANEL RELEASE

Grasp here and pull up to open the operation panel.

### 10. COPY/HELP key

When a document is in the feeder, press this key to make a copy of a document. At any other time, press this key to print out the Help List, a quick reference guide to the operation of your fax machine.

### 11. STOP key

Press this key to cancel an operation before it is completed.

### 12. START/MEMORY key

Press this key after dialing to begin fax transmission. Press this key before dialing to send a fax through memory. The key can also be pressed in the date and time display to show the percentage of memory currently used.

### 13. Arrow keys

Use these keys to scroll through and select settings, and to search for auto-dial numbers.

## [3] Transmittable documents

### 1. Document Sizes

Normal size	width	5.8" - 8.5" (148 - 216 mm)
	length	5.5" - 11" (140 - 279 mm)

XX Use document carrier sheet for smaller documents.

- \* With special sizes, only one sheet can be fed into the machine at a time. Insert next page into feeder as current page is being scanned.

### 2. Paper Thickness & Weight

	20 sheets	1sheet(Manual)
Paper weight	70 kg 21.5 lbs. (80 g/m <sup>2</sup> )	70 kg ~ 135 kg 14 lbs. ~ 42 lbs. (52 g/m <sup>2</sup> ~ 157g/m <sup>2</sup> )
Paper thickness (ref.)	0.1 mm	0.1 mm ~ 0.18mm
Paper size	LGL (216 mm x 355.6 mm) A4 (210 mm x 297 mm) LTR (216 mm x 279 mm)	
Feeder capacity	A4/LTR: 20 sheets LGL : 5 sheet	

### 3. Document Types

- Normal paper  
Documents handwritten in pencil (No. 2 lead or softer), fountain pen, ball-point pen, or felt-tipped pen can be transmitted.  
Documents of normal contrast duplicated by a copying machine can also be transmitted.
- Diazo copy (blue print)  
Diazo copy documents of a normal contrast may be transmitted.
- Carbon copy  
A carbon copy may be transmitted if its contrast is normal.

### 4. Cautions on Transmitting Documents

- Documents written in yellow, greenish yellow, or light blue ink cannot be transmitted.
- Ink, glue, and correcting fluid on documents must be dry before the documents can be transmitted.
- All clips, staples and pins must be removed from documents before transmission.
- Patched (taped) documents should be copied first on a copier and then the copies used for transmission.
- All documents should be fanned before insertion into the feeder to prevent possible double feeds.

## 5. Automatic Document Feeder Capacity

Number of pages that can be placed into the feeder at anytime is as follows:

Normal size: max. ADF 20 pages

Special size: Single sheet only (manual feeding)

- NOTES:
- When you need to send or copy more pages than the feeder limit, place additional pages in feeder when last page in feeder is being scanned.
  - Place additional pages carefully and gently in feeder. If force is used, double-feeding or a document jam may result.

## 6. Readable Width & Length

The readable width and length of a document are slightly smaller than the actual document size.

Note that characters or graphics outside the effective document scanning range will not be read.

#### • Readable width

8.3" (210mm), max.

#### • Readable length

This is the length of the document sent minus 0.16" (4mm) from the top and bottom edges.

## [4] Installation

### 1. Site selection

Take the following points into consideration when selecting a site for this model.

#### ENVIRONMENT

- The machine must be installed on a level surface.
- Keep the machine away from air conditioners, heaters, direct sunlight, and dust.
- Provide easy access to the front, back, and sides of the machine. In particular, keep the area in front of the machine clear, or the original document may jam as it comes out after scanning.
- The temperature should be between 41 - 95°F (5 - 35°C).
- The humidity should be between 25% and 85% (without condensation).

#### ELECTRICITY

AC 120V, 60Hz, grounded(3-prong) AC outlet is required.

#### Caution!

- Connection to a power source other than that specified will cause damage to the equipment and is not covered under the warranty.
- If your area experiences a high incidence of lightning or power surges, we recommend that you install a surge protector for the power and telephone lines. Surge protectors can be purchased at most telephone speciality stores.

#### If the machine is moved from a cold to a warm place...

Condensation may form on the reading glass if machine is moved from a cold to a warm place, this will prevent proper scanning of documents for transmission. Turn on the power and wait approximately 2 hours before using machine.

#### TELEPHONE JACK

A standard RJ11C single-line wall telephone jack must be located near the machine. This is the telephone jack commonly used in most homes and offices.

- Plugging the fax machine into a jack which is not RJ11C single-line wall telephone jack may result in damage to the machine or your telephone system. If you do not know what kind of jack you have, or need to have one installed, contact the telephone company.

## 2. Assembly and connections

- ① Connect the handset as shown and place it on the handset rest.

The ends of the handset cord are identical, so they will go into either jack.

Make sure the handset cord goes into the jack marked with a handset symbol on the side of the machine!

Use the handset to make ordinary phone calls, or to transmit and receive faxes manually.

- ② Attach the paper tray and paper trays.

Attach the paper tray.

Pull the paper plate toward you and attach the paper tray cover.

Attach the document tray.

Pull out the received document tray.

Attach the document exit support.

- ③ Plug the power cord into a 120 V, 60 Hz, grounded AC (3-prong) outlet.

**Caution:**

- Do not plug the power cord into any other kind of outlet. This will damage the machine and is not covered under the warranty.
- Make sure you have removed all of the packing tape before plugging in the power cord. Plugging in the power cord without doing so may damage the machine.
- The machine does not have a power on/off switch, so the power is turned on and off by simply plugging in or unplugging the power cord.

"CHECK CARTRIDGE" normally appears in the display the first time you plug in the machine. This message appears until you install the print cartridge.

**Note:** If your area experiences a high incidence of lightning or power surges, we recommend that you install surge protectors for the power and telephonelines. Surge protectors can be purchased at most telephone specialty stores.

- ④ Insert one end of the line cord into the jack on the back of the machine marked **TEL. LINE**. Insert the other end into a standard (RJ11C) single-line wall telephone jack.

**Setting the dial mode**

The fax machine is set for tone dialing. If you are on a pulse dial line, you must set the fax machine for pulse dialing. Press the panel keys as follows:

- Press **FUNCTION** once and **3** 3 times. Display: **OPTION SETTING**
- Press **RIGHT** once and **4** 4 times. **DIAL MODE**
- Press **LEFT** once. **1=TONE, 2=PULSE**
- Select the dial mode:  
TONE: **1** PULSE: **2**  
The display briefly shows your selection, then: **QUIET TIME**
- Press **STOP** to exit.

### 3. Installing the Print Cartridge

- The initial starter print cartridge included with your fax can print about 300 letter-size pages.
- When replacing the print cartridge, use a SHARP UX-C70B cartridge. One cartridge can print about 600 letter-size pages.
- The above yields are at 4% coverage in INK SAVE mode.

**Caution!**

Do not open the print compartment cover of the machine while it is printing. If opened while printing, printing will stop.

**Note:** Keep ink cartridges sealed in their packages until you are ready to install them. The ink in a sealed cartridge is guaranteed for one year. It is recommended that you do not use a cartridge that has been left unused for a long time after opening, as the print quality may be considerably degraded.

- Make sure the power cord of the machine is plugged in and paper is loaded before installing or replacing the print cartridge.

**1 Open the operation panel.**

If **PRINTER ERROR** or **PRINTER ERROR/CHECK PAPER** appears...

In the event that the display shows either of the above messages, you must clear the error before installing the print cartridge. The error can usually be cleared by opening and closing the print compartment cover (see Step 2), or if a paper jam has occurred, by removing the paper jam.

**2 Open the print compartment cover.**

- Press as shown and pull the cover toward you.

**3 Remove only the tape from the the new cartridge.**

- Important:** Make sure you remove all of the tape.

- CAUTION! DO NOT** touch the gold contact area of the cartridge.

**4 Make sure the cartridge holder is between the "CARTRIDGE EXCHANGE AREA" arrows on the label, and then pull the green lever and open the cartridge holder cover.**

- If you are replacing the cartridge, remove the old cartridge. If you are going to use the old cartridge again, place it in an air-tight container.
- CAUTION! DO NOT** touch the contact area inside the carriage carrier.

**Note:** If the print compartment cover is left open for approximately 30 minutes with a cartridge installed, the cartridge will automatically return to its home position. To make the cartridge return to the CARTRIDGE EXCHANGE AREA when this has happened, close the cover and then open it again.

- 5** Insert the new print cartridge into the cartridge holder.

- 6** Place your index finger on the tab as shown and close the cartridge holder cover with your thumb. Make sure the cover clicks into place.

- 7** Close the print compartment cover.

- 8** Close the operation panel, pressing down firmly on both front corners to make sure it clicks into place.

Display:

CHANGE CARTRIDGE  
↑ ↓  
1=NEW, 2=OLD

- 9** Press **1** (NEW) if the cartridge you installed is new.  
Press **2** (OLD) if the cartridge you installed is old.

Display when "1" is selected:

NEW CART.: OK?  
↑ ↓  
OK: PRESS START

If you select the wrong number by mistake,

press **STOP** and repeat the selection.

- 10** Press **START/MEMORY**.

If you selected "OLD" in the previous step, this completes the installation procedure. (Note: If you find that print quality is not satisfactory after reinstalling the old cartridge, align the cartridge.)

If you selected "NEW", the display will show the alternating messages at right. Continue with the following steps to align the print cartridge.

Display when "NEW" is selected:

ALIGN CARTRIDGE  
↑ ↓  
1=PRINT, 2=SET

- 11** Press **1** to print an alignment page. (To enter an alignment value without printing an alignment page, press **2**.)

- 12** In the alignment page that the machine prints, locate the line that comes closest to forming a completely straight line.

In this example, "15" comes closest to forming a straight line.

After the alignment page is printed, the display shows:

ENTER (0-30) 15

- 13** Press the number keys to enter the number of the straightest line.

Example: **1** **5**

- If you make a mistake, press **STOP** and then repeat the entry.

- 14** Press **START/MEMORY**.

**Note:** If at any time the display shows the alternating messages at right, check the printing paper. If the tray is empty, add paper. If there is paper in the tray, take it out and then reinsert it.

When you are finished, press **START/MEMORY**.

ADD PAPER &  
↑ ↓  
PRESS START KEY

## 4. Loading printing paper

You can load letter or legal size paper in the paper tray. Recommended paper weight is 20-lb. Copy Bond. The maximum number of sheets is as follows:

**Letter size:** Approx. 200 sheets (20-lb. copier paper at room temperature; maximum stack height should not exceed line on tray)  
**Legal size:** Approx. 100 sheets (20-lb. copier paper at room temperature)

- 1 Pull the paper plate toward you, and remove the paper tray cover from the paper tray.

- 2 If you are going to load legal paper, flip up the paper tray extension.

- 3 Pull the paper plate toward you and insert the stack of paper into the tray, **PRINT SIDE UP**.

- If paper remains in the tray, take it out and combine it into a single stack with the new paper.

Be sure to load the paper so that printing takes place on the **print** side of the paper. Printing on the reverse side may result in poor print quality.

- 4 Pull the paper plate toward you and replace the paper tray cover.

### ① Setting the paper size

The fax has been set at the factory to scale received faxes to letter size paper. If you loaded legal paper, you must change the paper size setting to LEGAL.

- 1 Press **FUNCTION** once and **OK** twice. Display: **PRINT SET-UP**
- 2 Press **RIGHT** once and **LEFT** once. Display: **PAPER SIZE SET**
- 3 Press **RIGHT** once. Display: **1=LETTER, 2=LEGAL**
- 4 Select the paper size:  
**LETTER: 1 LEGAL: 2**  
The display briefly shows your selection, then: **COPY CUT-OFF**
- 5 Press **STOP** to return to the date and time display.

### ② Contrast settings

AUTO  
DARK

Use AUTO for normal documents.  
Use DARK for faint documents.

- 1 Load the document(s).

- The document must be loaded before the resolution and contrast can be adjusted.

- 2 Press **RESOLUTION/RECEPTION MODE** one or more times until the desired resolution and contrast settings appear in the display.

- The first time you move through the list of resolution settings, the contrast setting AUTO will appear next to each resolution setting. The second time you move through the list, the contrast setting DARK will appear.

**Note:** In order to transmit in SUPER FINE resolution, the receiving fax machine must also have that resolution. If it doesn't, your machine will automatically step down to the next best available setting.

## 5. Clearing a jammed document

If the original document doesn't feed properly during transmission or copying,

or DOCUMENT JAMMED appears in the display, first try pressing . If the document doesn't feed out, remove it as explained below.

### Important:

Do not try to remove a jammed document without releasing it as explained below. This may damage the feeder mechanism.

- 1 Slowly open the operation panel until it is half open.

- 2 Flip up the green levers on each side of the white roller.

- 3 Gently remove the document.

- Be careful not to tear the document.

- 4 Flip down the green levers on each side of the white roller.

- 5 Close the operation panel, pressing down on both sides to make sure it clicks into place.

## 6. Clearing jammed printing paper

- 1 Open the operation panel.

- 2 Open the print compartment cover.

- Press as shown and pull the cover toward you.

- 3 Gently pull the jammed paper out of the machine, making sure no torn pieces of paper remain in the print compartment or rollers.

- 4 Close the print compartment cover.

- 5 Close the operation panel, pressing down firmly on both front corners to make sure it clicks into place.

## [5] Quick setup guide

Note: To enter your name and fax number and set the data and time so that they appear at the top of each fax you send, see pages 26-29 of your operation manual.

1

1. Press as shown and pull to open the print compartment cover.

2. Remove the packing tape.

3. Close the print compartment cover.

2

Attach the trays.

3

1. Connect the handset.

2. Connect the phone line cord to the **TEL. LINE** jack and a wall jack.

4

Load paper.

5

Plug the power cord into a 120-V grounded outlet.

6

Install the Print Cartridge.

1. Open the operation panel.

2. Press as shown and pull to open the print compartment cover.

3. Remove only the tape from the new cartridge. **IMPORTANT:** Make sure you remove all of the tape.

Caution! Do not touch the gold contact area.

NO GOOD

4. Make sure the cartridge holder is between the "CARTRIDGE EXCHANGE AREA" arrows on the label, and then pull the green lever and open the cartridge holder cover.

5. Insert the new print cartridge into the cartridge holder.

6. Place your index finger on the tab and close the cartridge holder cover with your thumb.

7. Close the print compartment cover and then the operation panel.

Display:  
CHANGE CARTRIDGE  
↑  
1=NEW, 2=OLD

8. a. Press **1** to select NEW.

b. Press **START/MEMORY** → **ALIGN CARTRIDGE**  
↑  
**1=PRINT, 2=SET**

c. Press **1** to print an alignment page.

9. In the alignment page that the machine prints, locate the line that comes closest to forming a completely straight line. Enter the number of that line.

Example: **1 5**

(If you make a mistake, press **STOP** and then repeat the entry.)

10. Press **START/MEMORY** and then **STOP** to exit.

## [6] Quick reference guide

### Sending Faxes

Place your document (up to 20 pages) face down in the document feeder.

#### Normal Dialing

1. Lift the handset or press .
2. Dial the fax number.
3. Wait for the reception tone (if a person answers, ask them to press their Start key).

4. Press .

#### Rapid Key Dialing

Press the appropriate Rapid Key.  
Transmission will begin automatically.

#### Speed Dialing

1. Press .
2. Enter the 2-digit Speed Dial number.
3. Press .

#### Search Dialing

1. Press or until the desired destination appears in the display.

2. Press .

#### Direct Keypad Dialing

1. Dial the fax number.

2. Press .

### Receiving Faxes

Press until the arrow in the display points to the desired reception mode.

**FAX mode:** The fax machine automatically answers and receives faxes.

**TEL mode:** Answer all calls (even faxes) by picking up the handset. To begin fax

reception, press .

**A.M. mode:** Select this mode when you want to use an answering machine that is connected to the fax.

### Storing Auto Dial Numbers

1. Press once and once.
2. Enter a 2-digit Speed Dial number (01 to 99; 01 to 18 for Rapid Key Dialing).
3. Enter the fax number and press .
4. Enter a name by pressing number keys.  
(To enter two letters in succession that require the same key, press after entering the first letter.)

SPACE =	G =	N =	U =
A =	H =	O =	V =
B =	I =	P =	W =
C =	J =	Q =	X =
D =	K =	R =	Y =
E =	L =	S =	Z =
F =	M =	T =	

5. Press and then .

## CHAPTER 2. ADJUSTMENTS

### [1] Adjustments

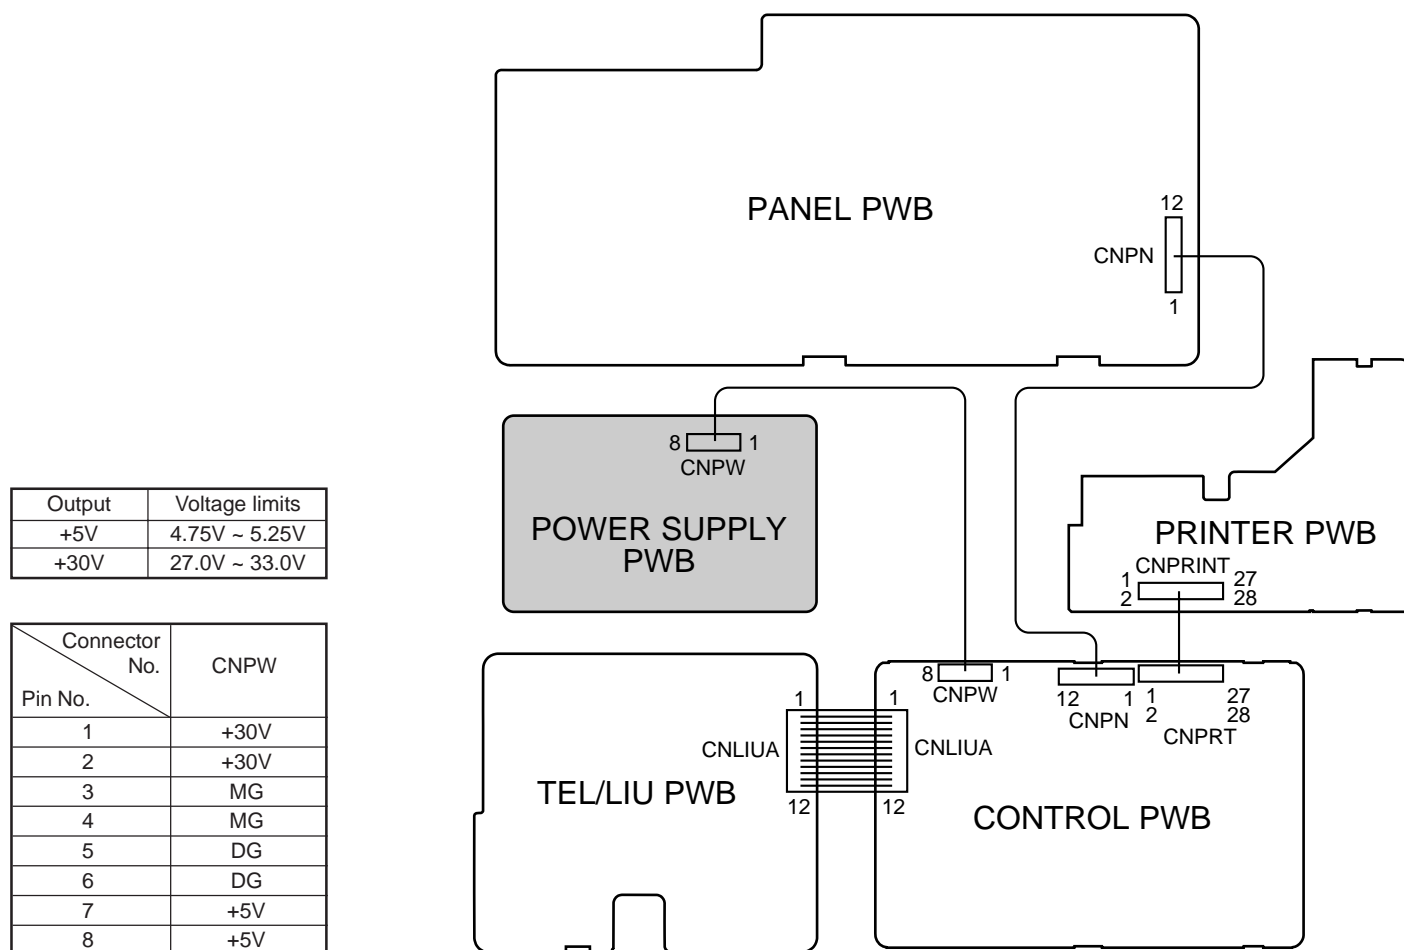

#### General

Since the following adjustments and settings are provided for this model, make adjustments and/or setup as necessary.

#### 1. Adjustments of output voltage (FACTORY ONLY)

1. Install the power supply unit in the machine.
2. Set the recording paper and document.
3. When the document is loaded, power is supplied to the output lines.  
Confirm that outputs are within the limits below.

#### Output voltage settings

Output	Voltage limits
+5V	4.75V ~ 5.25V
+30V	27.0V ~ 33.0V

Connector No.	CNPW
Pin No.

## 2. IC protectors replacement

ICPs (IC Protectors) are installed to protect the motor driver circuit. ICPs protect various ICs and electronic circuits from an overcurrent condition.

The location of ICPs are shown below:

- (1) FU100 (QFS-L1026YCZZ) is installed in order to protect IC's from an over-current generated in the motor drive circuit. If FU100 is open, replace it with a new one.
- (2) FU101 (QFS-L2016XHZZ) is installed in order to protect IC's from an over-current generated in the LIU or CIS control circuit. If FU101 is open, replace it with a new one.
- (3) FU1 (QFS-L1027YCZZ) is installed in order to protect IC's from an over-current generated in the motor drive circuit. If FU1 is open, replace it with a new one.

## 3. Settings

### (1) Dial mode selector

DIAL mode (Soft Switch No. SW-B4 DATA No. 3)

(step 1) Select "OPTION SETTING".

KEY : FUNCTION → ▼▼▼ → ►  
DISPLAY: OPTION SETTING NUMBER OF RING

(step 2) Select "DIAL MODE".

KEY: Push ▼ until DIAL MODE is → ►  
indicated because the number of ▼'s changes by the model.  
DISPLAY: DIAL MODE 1=TONE, 2=PULSE

(step 3) Select, using "1" or "2".

KEY: ①  
DISPLAY: TONE SELECTED  
KEY: ②  
DISPLAY: PULSE SELECTED

(step 4) End, using the "STOP" key.

## 4. Volume adjustment

You can adjust the volume of the speaker, handset, and ringer using the UP and DOWN keys.

### (1) Speaker

1. Press the **SPEAKER** key.
2. Press the **UP** or **DOWN** until the display shows the desired volume level.

Display:

SPEAKER: HIGH  
↑  
SPEAKER: MIDDLE  
↑  
SPEAKER: LOW

- Press **SPEAKER** key again to turn off the speaker.

### (2) Handset

1. When talking through the handset, press **UP** or **DOWN** until the display shows the desired volume level.

Display:

RECEIVER: HIGH  
↑  
RECEIVER: MIDDLE  
↑  
RECEIVER: LOW

- **Note:** The volume reverts to MIDDLE each time you replace the handset.

### (3) Ringer

1. Press the **UP** or **DOWN** key. (Make sure **SPEAKER** key has not been pressed, the handset is not lifted, and a document is not loaded in the feeder.)

Display:

RINGER: HIGH  
↑  
RINGER: MIDDLE  
↑  
RINGER: LOW  
↑  
RINGER OFF: OK?

- The ringer will ring once at the selected level.

2. If you selected RINGER OFF: OK?, to turn off the ringer, press START/MEMORY key.

## [2] Diagnostics and service soft switch

### 1. Operating procedure

#### (1) Entering the diagnostic mode

Press **FUNC** → **9** → **✕** → **8** → **#** → **7**, and the following display will appear.

TA77 ✕ or TA95 ✕ / TA71 ✕ After 2 sec: **DIAG MODE**

control PWB ROM

TA77 ✕ (UX-B700U)

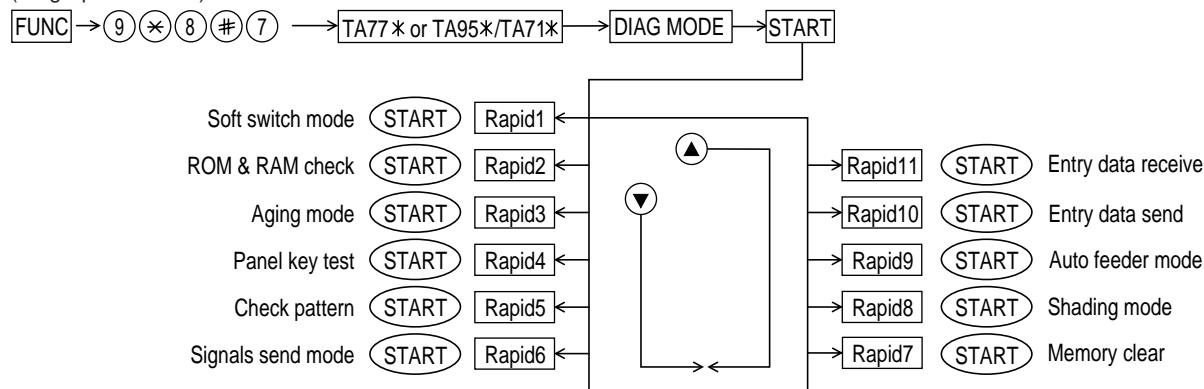

TA95 ✕ (FO-B1600U)

printer PWB ROM

TA71 ✕ (UX-B700U/FO-B1600U)

Then press the **START** key. Select the desired item with the up key or the down key or select with the rapid key. Enter the mode with the START key.

(Diag. specifications)

If the diag mode cannot be set, repeat the diag mode operation, performing the following operation.

After the power is turned on and "WAIT A MOMENT" is indicated, press the STOP key.

In relation with the process response (request from Production Engineering) "WAIT A MOMENT" clock indication may appear depending on STOP key timing. If the STOP key is held down, "MEMORY CLEAR?" appears.

### 2. Diagnostic items

ITEM No.	Rapid No.	Contents	Function
1	Rapid 1	SOFT SWITCH MODE	Soft switches are displayed and changed. List can be output.
2	Rapid 2	ROM & RAM CHECK	ROM is sum-checked, and RAM is matched. Result list is output.
3	Rapid 3	AGING MODE	10 sheets of check patterns are output every 5 minutes per sheet.
4	Rapid 4	PANEL KEY TEST	Panel keys are tested. Result list is output.
5	Rapid 5	CHECK PATTERN	Check pattern is output.
6	Rapid 6	SIGNALS SEND MODE	Various signals of FAX communication are output.
7	Rapid 7	MEMORY CLEAR	Back-up memory is cleared, and is set at delivery.
8	Rapid 8	SHADING MODE	Shading compensation is performed in this mode.
9	Rapid 9	AUTO FEEDER MODE	Insertion and discharge of document are tested.
10	Rapid 10	ENTRY DATA SEND	Registered content is sent.
11	Rapid 11	ENTRY DATA RECEIVE	Registered content is received, and its list is output.

### 3. Diagnostic items description

#### 3. 1. Soft switch mode

Used to change the soft switch settings.

The soft switch which is stored internally is set by using the keys.

The available soft switches are SW-A1 to SW-P7.

The content of soft switches is shown in Soft switch description.

The contents are set to factory default settings.

#### 3. 2. ROM & RAM check

ROM executes the sum check, and RAM executes the matching test.

The result will be notified with the number of short sounds of the buzzer as well as by printing the ROM & RAM check list.

Number of short sounds of buzzer 0 → No error  
1 → FAX engine ROM error  
2 → Printer engine ROM error  
3 → RAM error

(4Kbytes SRAM or 2Mbytes DRAM or Printer 512bytes NV-RAM)

#### 3. 3. Aging mode

If any document is present, copying will be executed sheet by sheet. If no document is present, the check pattern will be printed sheet by sheet. This operation will be executed at a rate of one sheet per 5 minutes, and will be ended at a total of 10 sheets.

#### 3. 4. Panel key test

This mode is used to check whether each key operates properly. Press the key on the operation panel, and the key will be displayed on the LCD. Therefore, press all keys. At this time, finally press the STOP key. When the STOP key is pressed, the keys that are not judged as "pressed" will be printed on the result list.

- LED part of the contact image sensor (CIS) is kept on during the term from when "START" of the panel test mode to end with the STOP key.

#### 3. 5. Check pattern

Check patterns are printed on one sheet.

Printing performance: The following 4 items are checked.

- Print area: Checks that the print area is reserved.
- Nozzles: When checking the nozzle, make sure at least 1 line is printed in each block: all the blocks of horizontal black bars and the black line patterns in (B) and (C) ((B): 16 patterns, (C): 13 patterns).  
(Note: If the nozzle (A) is not spraying properly, checking the area (B) and (C) may be difficult (or may not be printed at all). In this case, print again.
- Vertical align: Checks that the straight vertical line is drawn instead of crooked line.
- Skew: Checks the skew of the recording paper.

Detailed of check patterns

- |                 |               |                  |
|-----------------|---------------|------------------|
| ① Top skew      | ② Nozzle test | ③ Vertical lines |
| ④ Bottom skew   | ⑤ Top margin  | ⑥ Left margin    |
| ⑦ Bottom margin |               |                  |

### 3. 6. Signals send mode

This mode is used to send various signals to the circuit during FAX communication. Every push of START key sends a signal in the following sequence. Moreover, the signal sound is also output to the speaker when the line monitor of the soft switch is on.

- |                     |                        |
|---------------------|------------------------|
| [1] No signals      | [8] 9600BPS (V.29)     |
| [2] 14400BPS (V.33) | [9] 7200BPS (V.29)     |
| [3] 12000BPS (V.33) | [10] 4800BPS (V.27ter) |
| [4] 14400BPS (V.17) | [11] 2400BPS (V.27ter) |
| [5] 12000BPS (V.17) | [12] 300BPS (FLAG)     |
| [6] 9600BPS (V.17)  | [13] 2100Hz (CED)      |
| [7] 7200BPS (V.17)  | [14] 1100Hz (CNG)      |

### 3. 7. Memory clear

This mode is used to clear the backup memory and reset to the default settings.

### 3. 8. Shading mode

The mode is used for the shading compensation. For reading, set up the special original paper. (Refer to page 8-6)

The compensation memorizes the reference data of white and black for reading.

Moreover, the memorized data is not erased even if memory clear mode is executed.

### 3. 9. Auto feeder mode

In this mode, a document is inserted and discharged to check the auto feed function.

After this mode is started, set a document, and the document feed will be automatically tested.

### 3. 10. Entry data send

This mode is used to send the registered data to another machine and make the other machine copy the registered content.

Before sending in this mode, it is necessary to set the other machine at the entry data receive mode.

The following information will be sent to the remote machine:

1. Telephone list data
2. Sender register data
3. Optional setting data
4. Soft switch content
5. Junk fax number
6. Recording setting list data

### 3. 11. Entry data receive

In this mode, the registered data sent from the other machine is received and the received data is registered in the machine. When this mode is used for receiving, the other machine must be in the entry data send mode.

After receiving is completed, the following lists are printed.

1. Telephone list data
2. Sender register list (\*)
3. Optional setting list (\*)
4. Soft switch content
5. Junk fax number list (\*)
6. Recording setting list data (\*)

(\*): Refer to SETUP LIST

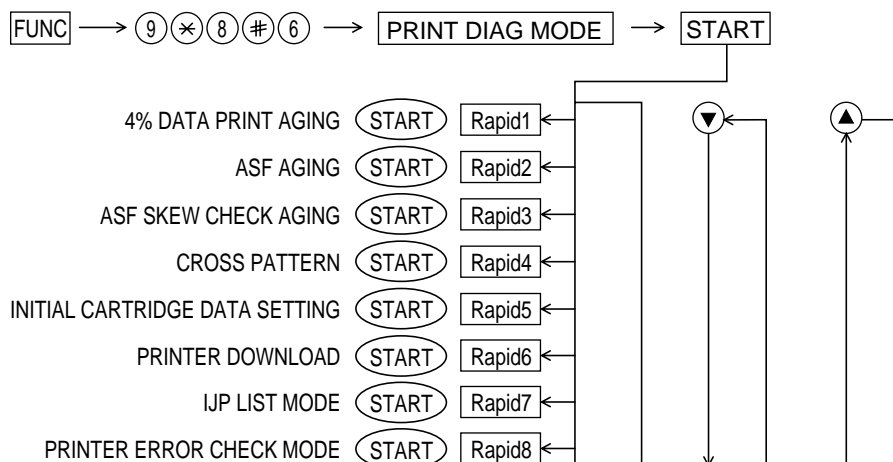

## 4. Entering the printer diagnostic mode

Press **FUNC** → **9** → **✕** → **8** → **#** → **6**, and the following display will appear.

**PRINT DIAG MODE**

Then press the **START** key. Select the desired item with the up key or the down key or select with the rapid key. Enter the mode with the START key.

(Diag•specifications)

If the diagnostic mode cannot be set, repeat the diagnostic mode operation, performing the following operation. After the power is turned on and "WAIT A MOMENT" is indicated, press the STOP key.

In relation with the process response (request from Production Engineering) "WAIT A MOMENT" clock indication may appear depending on STOP key timing. If the STOP key is held down, "MEMORY CLEAR?" appears.

## 5. Printer diagnostic items

ITEM No.	Rapid No.	Contents	Function
1	Rapid 1	4% DATA PRINT AGING	4% of printing data continue to be printed.
2	Rapid 2	ASF AGING	The feed of the paper is continued.
3	Rapid 3	ASF SKEW CHECK AGING	The frame pattern continues to be printed to check the inclination performance.
4	Rapid 4	CROSS PATTERN	The image data of the cross pattern to be printed.
5	Rapid 5	INITIAL CARTRIDGE DATA SETTING	It makes the dot counter the setting for the initial cartridge.
6	Rapid 6	PRINTER DOWNLOAD	This mode rewrites the software of the printer engine.
7	Rapid 7	IJP LIST MODE	The maintenance data is printed.
8	Rapid 8	PRINTER ERROR CHECK MODE	The cause of "PRINTER ERROR" message is displayed.

## 6. Printer diagnostic items description

### 6. 1. 4% data print aging

This mode is the aging mode that prints the text pattern of 4%

### 6. 2. ASF aging (all white)

This mode is the aging mode that tests the performance of the ASF function.

### 6. 3. ASF skew check aging

This mode is the aging mode that tests the performance of the ASF function. Detailed of check patterns

1. Top skew
2. Bottom skew
3. Top margin
4. Bottom margin

### 6. 4. Cross pattern

This mode prints the test pattern that tests the performance of the printer.

### 6. 5. Initial cartridge data setting

This mode makes the dot counter the setting for initial cartridge. And this mode resets the following counter.

1. Replacement counter of the cartridge
2. Paper jam counter

### 6. 6. Printer download

This mode rewrites the software of the printer engine.

## 6. 7. IJP list mode

Maintenance data of the printer is output.

[Details of maintenance data]

Item	Clear timing	Updata timing
Dot counter	At the replacement cartidge	After printing
Page counter	At the replacement cartidge	After printing
Number of head cleaning (Wiping of cartridge)	At the initial cartridge setting	At the maintenance
Replacement counter of the cartridge	At the initial cartridge setting	At the replacement of cartridge
Jam counter	At the initial cartridge setting	At every paper jam

## 6. 8. Printer error check mode

The cause of "PRINTER ERROR" message is displayed.

[Details of Display]

Display	Cause of "PRINTER ERROR" message
PRINTER ERR 01	Power on reset response was not received from printer.
PRINTER ERR 02	Printer interface ASIC data buffer was full and not resume for 180sec.
PRINTER ERR 03	Carrier was not reached to cap position for 15sec after cover closed.
PRINTER ERR 04	NPA command was not forwarded to printer for 5sec.
PRINTER ERR 05	Printer interface ASIC command buffer error was occurred during NPA command forwarding.
PRINTER ERR 06	NPA response was not received for 5sec.
PRINTER ERR 07	Printer interface ASIC response buffer error was occurred during NPA response receiving.
PRINTER ERR 08	ESC* command was not forwarded to printer for 5sec.
PRINTER ERR 09	Printer interface ASIC command buffer error was occurred during ESC* command forwarding.
PRINTER ERR 10	Print data transfer from Printer interface ASIC to printer was not completed for 180sec.
PRINTER ERR 11	Last printed page was not exited for 60sec.
PRINTER ERR 12	Carrier was not reached to cap position for 60sec after last printed page was exited.
PRINTER ERR 13	Alignment pattern or Clean nozzles pattern printing was not completed for 60sec.
PRINTER ERR 14	Printer interface ASIC print data bit error was occurred.
PRINTER ERR 15	Printer interface ASIC print data DRAM writing error was occurred.
PRINTER ERR 21	Reserved
PRINTER ERR 22	Reserved
PRINTER ERR 23	Reserved
PRINTER ERR 24	Carrier stall error
PRINTER ERR 25	Printer PWB NVRAM error
PRINTER ERR 26	Printer could not output print data.
PRINTER ERR 27	Printer head short error
PRINTER ERR 31	Received NPA response was not for "Loop Back" command.
PRINTER ERR 32	Received NPA response was not for "Register For DSA" command.
PRINTER ERR 33	Received NPA response was not for "Print Head Information" command.
PRINTER ERR 34	Received NPA response was not for "Set Alignment Data" command.
PRINTER ERR 35	Received NPA response was not for "Get Printer Firmware Version" command.
PRINTER ERR 36	Received NPA response was not for "Printer ROM & RAM Check" command.
PRINTER ERR 37	Received NPA response was not for "Printer ROM Checksum" command.
PRINTER ERR 38	Received NPA response was not for "Cartridge Initial" command.
PRINTER ERR 39	Received NPA response was not for "Default Cartridge" command.
PRINTER ERR 40	Received NPA response was not for "Reset Wipe Count" command.
PRINTER ERR 41	Received NPA response was not for "Reset Page Count" command.
PRINTER ERR 51	Invalid command parameters was forwarded to printer.
PRINTER ERR 52	No supported command was forwarded to printer.
PRINTER ERR 53	Forwarded command was rejected by printer.

## 7. How to make soft switch setting

To enter the soft switch mode, press the following key entries in sequence.

Press **FUNCTION** **9** **\*** **8** **#** **7** **START** **START**

DATA No.	1	2	3	4	5	6	7	8
S F T SW-A1 =	0	0	0	0	0	0	0	0
S F T SW-A1 =	1	0	0	0	0	0	0	0
S F T SW-A1 =	1	0	0	0	0	0	0	0
S F T SW-A1 =	1	0	0	0	0	0	0	0
S F T SW-A1 =	1	0	0	0	0	0	0	0
S F T SW-A2 =	0	0	0	0	0	0	0	0
S F T SW-P7 =	0	0	0	0	0	0	0	0

Press **FUNCTION** key.

Press **#** key.

Press **\*** key.

Bit1 - 8 are set.

Press **START** key during setting.

Soft SW-A2 - SW-P7 are set.

- To finish the settings halfway between SW-A1 and SW-N3, press the STOP key. In this case, the setting being done to the SW No. on display will be nullified while settings done to the preceding SW No. remain in effect.
- When the COPY key is pressed, the contents of soft switches are printed.

The soft switch mode is terminated.

## 8. Soft switch description

### • Soft switch

SW NO.	DATA NO.	ITEM	Switch setting and function										Initial setting	Remarks
			1					0						
SW I A1	1	Protect from echo	No					Yes					0	
	2	Forced 4800bps reception	Yes					No					0	
	3	Footer print	Yes					No					0

## • Soft switch function description

### SW-A1 No. 1 Protect from echo

Used to protect from echo in reception.

### SW-A1 No. 2 Forced 4800bps reception

When line conditions warrant that receptions take place at 4800 BPS repeatedly.

It may improve the success of receptions by setting at 4800BPS.

This improves the receiving document quality and reduces handshake time due to fallback during training.

### SW-A1 No. 3 Footer print

When set to "1", the date of reception, the sender machine No., and the page No. are automatically recorded at the end of reception.

### SW-A1 No. 4 Length limitation of copy/send/receive

Used to set the maximum page length.

To avoid possible paper jam, the page length is normally limited to 0.6 meter for copy or transmit, and 1 meters for receive.

It is possible to set it to "No limit" to transmit a long document, such as a computer print form, etc. (In this case, the receiver must also be set to no limit.)

### SW-A1 No. 5 CSI transmission

(CSI TRANSMISSION) is a switch to set whether the machine sends or does not send the signal (CSI signal) informing its own telephone No. to the remote fax machine when information is received. When "nonsending" is set, the telephone No. is not output on the remote transmitting machine if the remote transmitting machine has the function to display or print the telephone No. of receiving machine, using this CSI signal.

### SW-A1 No. 6 DIS receive acknowledgment during G3 transmission

Used to make a choice of whether reception of DIS (NSF) is acknowledged after receiving two DISs (NSFs) or receiving one DIS (two NSF). It may be useful for overseas communication to avoid an echo suppression problem, if set to 1.

### SW-A1 No. 7 Non-modulated carrier for V29 transmission mode

Though transmission of a non-modulated carrier is not required for transmission by the V29 modem according to the CCITT recommendation, it may be permitted to send non-modulated carrier before the image signal to avoid an echo suppression problem. It may be useful for overseas communication to avoid an echo suppression problem, if set to 1.

### SW-A1 No. 8 EOL (End Of Line) detect timer

Used to make a choice of whether to use the 25-second or 13-second timer for detection of EOL.

This is effective to override communication failures with some facsimile models that have longer EOL detection.

### SW-A2 No. 1 ~ No. 4 Modem speed

Used to set the initial modem speed. The default is 14400BPS.

It may be necessary to program it to a slower speed when frequent line fallback is encountered, in order to save the time required for fallback procedure.

### SW-A2 No. 5 Sender's information transmit

(SENDER'S INFORMATION TRANSMISSION) is a switch to set the function to print the content of HEADER PRINT described in the passcode list at the front end of receiver's original when original is sent to the remote machine.

If this switch is set to "NO", the HEADER PRINT is not output at the receiving machine.

### SW-A2 No. 6 Reserved

Set to "0".

### SW-A2 No. 7 Communication error treatment in RTN sending mode (Reception)

Used to determine communication error treatment when RTN is sent by occurrence of a received image error in G3 reception. When it is set to "1", communication error is judged as no error.

### SW-A2 No. 8 CNG transmission

When set to "0", this model allows CNG transmission by pressing the Start key in the key pad dialing mode. When set to "1", CNG transmission in the key pad dialing mode cannot be performed. In either case, CNG transmission can be performed in the auto dial mode.

### SW-A3 No. 1, No. 2 CED tone signal interval

For international communication, the 2100Hz CED tone may act as an echo suppression switch, causing a communication problem.

Though SW-A3 No. 1 and No. 2 are normally set to 0, this setting is used to change the time between the CED tone signal to eliminate the communication caused by echo.

### SW-A3 No. 3 MR coding

MR Coding is enable.

### SW-A3 No. 4 ECM mode

Used to determine ECM mode function. Refer to following table.

SW-A3 No.4 ECM MODE		0	0	1	1
SW-A3 No.5 ECM MMR MODE		0	1	0	1
Compression method	ECM MMR mode	Yes	No	No	No
	ECM MH mode	Yes	Yes	No	No
	MR Mode	Yes	Yes	Yes	Yes

(Depending on remote machine)

### SW-A3 No. 5 ECM MMR mode

See SW-A3 No. 4.

### SW-A3 No. 6 ~ No. 8 Reserved

Set to "0".

### SW-A4 No. 1 ~ No. 5 Signal transmission level

Used to control the signal transmission level in the range of 0dB to -31dB.

### SW-A4 No. 6 Protocol monitor (Error print)

If set to "1", protocol is printed at communication error.

### SW-A4 No. 7 Protocol monitor

Normally set to "0". If set to "1", communication can be checked, in case of trouble, without using a G3 tester or other tools.

When communication FSK data transmission or reception is made, the data is taken into the buffer. When communication is finished, the data is analysed and printed out. When data is received with the line monitor (SW-A4 No. 8) set to "1" the reception level is also printed out.

### SW-A4 No. 8 Line monitor

Normally set to "0". If set to "1", the transmission speed and the reception level are displayed on the LCD. Used for line tests.

### SW-A5 No. 1, No. 2 Digital line equalization setting (Reception)

Line equalization when reception is to be set according to the line characteristics.

Setting should be made according to distance between the telephone and the telephone company central switching station.

### SW-A5 No. 3, No. 4 Digital line equalization setting (Transmission)

Line equalization when transmitter is to be set according to the line characteristics.

Setting should be made according to distance between the telephone and the telephone company central switching station.

### SW-A5 No. 5, No. 6 Digital cable equalizer setting (Reception for Caller ID)

Line equalization when reception for CALLER ID is to be set according to the line characteristics.

Setting should be made according to distance between the telephone and the telephone company central switching station.

### SW-A5 No. 7 Error criterion

Used to select error criterion for sending back RTN when receiving image data.

### SW-A5 No. 8 Anti junk fax check

When using the Anti junk fax function, set to "1".

### SW-A6 No. 1 Reserved

Set to "0".

### SW-A6 No. 2 End buzzer

Setting this bit to 0 will disable the end buzzer (including the error buzzer/on-hook buzzer).

### SW-A6 No. 3 Disconnect the line when DIS is received in RX mode

Bit1= 0: When DIS signal is received during RX mode, the line is disconnected immediately.

Bit1= 1: When DIS signal is received during RX mode, the line is disconnected on the next tone.

### SW-A6 No. 4 Equalizer freeze control (MODEM)

This switch is used to perform reception operation by fixing the equalizer control of modem for the line which is always in an unfavorable state and picture cannot be received.

\* Usually, the control is executed according to the state of line where the equalizer setting is changed always.

### SW-A6 No. 5 Equalizer freeze control 7200bps only

Setting which specifies SW-A6 No. 4 control only in the condition of 7200BPS modem speed.

### SW-A6 No. 6 CNG transmission in manual TX mode

When set to "1", fax transmit the CNG signal in case of manual transmission mode (User press the START key after waiting for the fax answering signal from handset or speaker).

### SW-A6 No. 7 Reserved

Set to "0".

### SW-A6 No. 8 Modem speed automatic fallback when RX level is under -40dBm

When set to "1", if fax signal level is under -40dBm during reception, machine selects the slower modem speed automatically.

It is effective when noises occur on the received document due to the long distance communications.

### SW-B1 No. 1 ~ No. 4 Recall interval

Choice is made for a redial interval for speed and rapid dial calls.

Use a binary number to program this. If set to 0 accidentally, 1 will be assumed.

### SW-B1 No. 5 ~ No. 8 Recall times

Choice is made as to how many redials there should be.

### SW-B2 No. 1 Dialing pause (sec/pause)

Pauses can be inserted between telephone numbers of direct dial connection. Selection of 4 sec or 2 sec pause is available.

### SW-B2 No. 2 Dial tone detection (before auto dial)

Used to set YES/NO of dial tone detection in auto dialing.

### SW-B2 No. 3 Reserved

Set to "0".

### SW-B2 No. 4 Busy tone detection (after auto dial)

Used to set busy tone detection in auto dialing.

### SW-B2 No. 5, No. 6 Waiting time after dialing

This is time waiting for the opponent's signals after dialing.

### SW-B2 No. 7, No. 8 Reserved

Set to "0".

### SW-B3 No. 1 ~ No. 5 Reserved

Set to "0".

### SW-B3 No. 6, No. 7 Auto dial mode delay timer of before line connect

Delay time between the dial key input and line connection under the auto dial mode.

### SW-B3 No. 8 Hold key

Used to set YES/NO of holding function by the HOLD key.

### SW-B4 No. 1, No. 2 Auto dial mode delay timer of after line connect

Delay time between the line connection and dial data output under the auto dial mode.

### SW-B4 No. 3 Dial mode

When using the pulse dial, set to 1. When using the tone dial, set to 0.

### SW-B4 No. 4 Pulse → Tone change function by ✕ key

When setting to 1, the mode is changed by pressing the ✕ key from the pulse dial mode to the tone dial mode.

### SW-B4 No. 5 Dial pulse make/break ratio (%)

When using the 33% make ratio pulse dial, set to "0".

When using the 40% make ratio pulse dial, set to "1".

### SW-B4 No. 6, No. 7 Reserved

Set to "0".

### SW-B4 No. 8 Recalling fixed only one time when dialing was unsuccessful without detecting busy tone signal

When dialing results in failure since the busy tone cannot be detected, recalling is fixed to one time.

Supplementary explanation

If time-out termination is made when dialing, only single recall is possible even if the setting time of recalls (SW-B1 No. 5 - No. 8) has been set to some times. This soft switch is added in order to meet FCC.

### SW-B5 No. 1 ~ No. 5 DTMF signal transmission level (Low)

The dial signal of a push button telephone is called DTMF(dual-tone multi-frequency). These tones consist of two signals, one from a high group of frequencies and one from a low group of frequencies. Represent each of the push button telephone characters shown as below.

Low Frequency	High Frequency		
	1209Hz	1336Hz	1477Hz
697Hz	1	2	3
770Hz	4	5	6
852Hz	7	8	9
941Hz	✕	0	#

The transmission level of DTMF signal is adjusted. (lower frequency)

00000: 0dBm

↓

11111: -15.5dBm (-0.5dBm x 31)

### SW-B5 No. 6 ~ No. 8 Reserved

Set to "0".

**SW-B6 No. 1 ~ No. 5 DTMF signal transmission level (High)**

The transmission level of DTMF signal is adjusted. (higher frequency)

00000: 0dBm

↓

11111: -15.5 dBm (-0.5dBm x 31)

**SW-B6 No. 6 ~ No. 8 Reserved**

Set to "0".

**SW-C1 No. 1, No. 2 Reading slice (Binary)**

Used to determine the set value of reading density in standard/fine mode.  
The standard setting is "00" (Factory setting is "00")

**SW-C1 No. 3, No. 4 Reading slice (Half tone)**

Used to determine the set value of reading density in half tone mode.  
The standard setting is "00" (Factory setting is "00")

**SW-C1 No. 5 Line density selection**

Used to set the transmission mode which is automatically selected when the Resolution key is not pressed. In the copy mode, however, the fine mode is automatically selected unless the Resolution key is manually set to another mode.

**SW-C1 No. 6 Reserved**

Set to "0".

**SW-C1 No. 7 MTF correction in half tone mode**

This allows selection of MTF correction (dimness correction) in the half tone mode.

When "NO" (=1) is selected, the whole image becomes soft and mild.  
Clearness of characters will be reduced. Normally set to "YES" (=0).

**SW-C1 No. 8 Reserved**

Set to "0".

**SW-D1 No. 1 ~ No. 4 Number of rings for auto receive**

When the machine is set in the auto receive mode, the number of rings before answering can be selected. It may be set from one to four rings using a binary number. Since the facsimile telephone could be used as an ordinary telephone if the handset is taken off the hook, it should be programmed to the user's choice. If the soft switch was set to 1, direct connection is made to the facsimile. If a facsimile calling beep was heard when the handset is taken off the hook, press the START key and put the handset on the hook to have the facsimile start receiving. If it was set to 0 accidentally, receive ring is set to 1.

NOTE: If the machine is set to answer after a large number of rings, it may not be able to receive faxes successfully. If you have difficulty receiving faxes, reduce the number of rings to a maximum of 6.

**SW-D1 No. 5 Automatic switching manual to auto receive**

This soft switch is used to select whether the machine should switch to the auto receive mode after 5 rings in the manual receive mode or remain in the same way as SW-D1 No. 1, No. 2, No. 3 and No. 4 "0"1"0"0"(5 rings).

**SW-D1 No. 6 Reserved**

Set to "0".

**SW-D1 No. 7, No. 8 CI detect frequency**

Detection frequency of ring signal for auto reception is set.

When set to No. 7=0, No. 8=0, frequency is set to PTT recommendation.

When set to No. 7=0, No. 8=1, frequency is set to 11.5Hz or more.

When set to No. 7=1, No. 8=0, frequency is set to 13.0Hz or more.

When set to No. 7=1, No. 8=1, frequency is set to 20.0Hz or more.

**SW-D2 No. 1 ~ No. 3 Distinctive ringing setting (PATTERN 4 and 5 are for CANADA only)**

This function allows reception of services offered by USA and Canada telephone companies in which the customer contracts with the telephone company to have up to 4 telephone numbers (USA) or 6 telephone numbers (Canada) established for one line.

Each telephone number is signalled by a different ringing pattern, and the customer can allocate each number to a specific use.

<Example of use>

	Phone Number	Intended Purpose	Ring Pattern
Ring Pattern	555-1234	Voice Calls	Standard
	555-1235	Facsimile Calls	Pattern 1
	555-1236	Answering Machine	Pattern 2
	555-1237	PC Modem	Pattern 3

<Distinctive Ringing Timing Specifications>

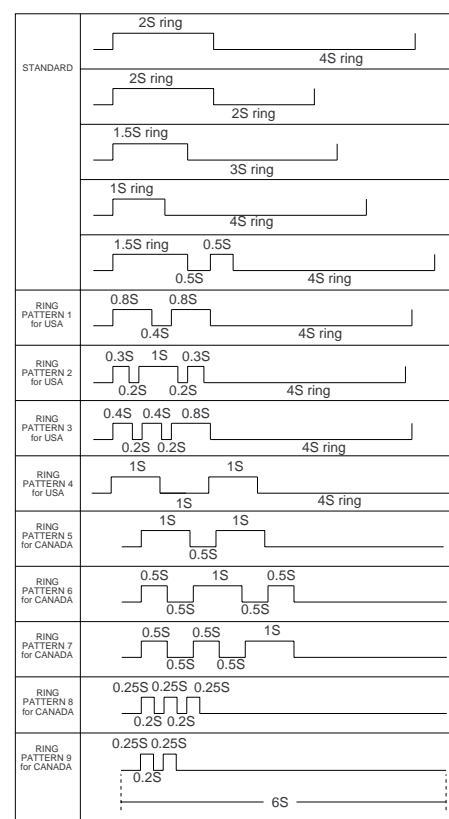

**1) USA****2) Canada****• Ring Pattern**

STANDARD has 5 ring patterns, and DISTINCTIVE has 9 patterns.  
Ring patterns ① ~ ④ for USA, and ⑤ ~ ⑨ for Canada.

However, to make the setting procedure as easy as possible for the user to understand these patterns are grouped as follows:

<Optional Setting>

1) RING PATTERN 1	RING PATTERN ① for USA
	RING PATTERN ④ for USA
	RING PATTERN ⑤ for Canada
2) RING PATTERN 2	RING PATTERN ② for USA
	RING PATTERN ⑥ for Canada
3) RING PATTERN 3	RING PATTERN ③ for USA
	RING PATTERN ⑦ for Canada
4) RING PATTERN 4	RING PATTERN ⑧ for Canada
5) RING PATTERN 5	RING PATTERN ⑨ for Canada
6) STANDARD RING	
7) OFF SETTING	

#### SW-D2 No. 4 Reserved

Set to "0".

#### SW-D2 No. 5 Caller ID function

Used for Caller ID function.

#### SW-D2 No. 6 Caller ID detect during CI off

Detection of caller ID signal is performed as follows:

0:First CI OFF only

1:All of CI OFF

#### SW-D2 No. 7, No. 8 Reserved

Set to "0".

#### SW-D3 No. 1 ~ No. 5 CI off detection timer (0-1550ms setting by 50ms step)

Set the minimum time period of CI signal interruption which affords to be judged as a CI OFF section with 50ms steps.

(Example)

01110 (50ms ~ 14):

700ms (CI interruption>700ms:Judged as a CI OFF section)

The section 1 is not judged as a CI OFF section, the CI signal A is counted as one signal.

The section 2 is judged as a CI OFF section, the CI signal B is considered as the second signal.

00111 (50ms ~ 7):

350ms (CI interruption>350ms:Judged as a CI OFF section)

The section 1 is judged as a CI OFF section, and the CI signal A is counted as two signals.

The section 2 is judged as a CI OFF section, and the CI signal B is considered as the third signal.

#### SW-D3 No. 6 ~ No. 8 Reserved

Set to "0".

#### SW-E1 No. 1 ~ No. 8 Reserved

Set to "0".

#### SW-E2 No. 1 ~ No. 8 Reserved

Set to "0".

#### SW-E3 No. 1 ~ No. 8 Reserved

Set to "0".

#### SW-F1 No. 1, No. 2 DTMF detect time

Used to set detect time of DTMF (Dual Tone Multi Frequency) used in remote reception (5 × × ).

The longer the detect time is, the less the error detection is caused by noises.

#### SW-F1 No. 3 Protection of remote reception (5 × × ) detect

Used to set the function of remote reception (5 × × ). When set to "1", the remote reception function is disabled.

#### SW-F1 No. 4 Remote reception with GE telephone

(Corresponding to TEL mode by GE) P. B. X.

"1": Compatible with TEL mode by GE

"0": Not compatible

- When sending (5 × × ) for remote reception with a GE manufactured telephone remote reception may not take place because of special specifications in their DTMF.  
To overcome this, a soft SW is provided to change the modem setting to allow for remote reception.
- If this soft SW is set to "1", other telephone sets may be adversely affected.

#### SW-F1 No. 5 ~ No. 8 Remote operation code figure by external TEL (0 ~ 9)

Remote operation codes can be changed from 0 through 9. If set to greater than 9, it defaults to 9. The "5 × × " is not changed.

Ex-7 × × (Default: 5 × × )

#### SW-F2 No. 1 CNG detection in STAND-BY mode

When setting to "1", the CNG signal detection function during stand-by stops.

#### SW-F2 No. 2, No. 3 Number of CNG detect (AM mode)

Used for detection of CNG in 1 to 4 pulses.

#### SW-F2 No. 4, No. 5 Number of CNG detect (STAND-BY mode)

Used for detection of CNG in 1 to 4 pulses.

#### SW-F2 No. 6 ~ No. 8 Reserved

Set to "0".

#### SW-G1 No. 1 ~ No. 4 Quiet detect time

When an answering machine is connected, if a no sound state is detected for a certain period of time, the machine judges it as a transmission from a facsimile machine and automatically switches to the Fax mode.

#### SW-G1 No. 5 ~ No. 8 Quiet detect start timing

Inserts a pause before commencing quiet detection.

#### SW-G2 No. 1 ~ No. 8 Reserved

Set to "0".

#### SW-G3 No. 1 ~ No. 4 Reserved

Set to "0".

#### SW-G3 No. 5, No. 6 Section time of quiet detection

The switch which sets the time from the start of detection function to the end of the function.

#### SW-G3 No. 7 Choice after quiet detect

"0": The reception begins when no sound is detected in A.M. mode.

"1": The DIS signal is transmitted only once when no sound is detected in A.M. mode.

#### SW-G3 No. 8 Reserved

Set to "0".

#### SW-H1 No. 1, No. 2 Busy tone detection ON/OFF time (Lower duration)

The initial value of detection is set according to electric condition.

The set value is changed according to the local switch board. (Erroneous detection of sound is reduced.)

Normally the upper limit is set to 900msec, and the lower limit to 200msec.

If erroneous detection is caused by sound, etc., adjust the detection range.

The lower limit can be set in the range of 350msec to 150msec.

**SW-H1 No. 3, No. 4 Busy tone detection ON/OFF time (Upper duration)**

Similarly to SW-H1 No.1, the set value can be varied.  
The upper limit can be set in the range of 650msec to 2700msec.

SW-H1 No.1	SW-H1 No.2	SW-H1 No.3	SW-H1 No.4	Detection range
0	0	0	0	150msec ~ 650msec
0	0	0	1	150msec ~ 900msec
0	0	1	0	150msec ~ 1500msec
0	0	1	1	150msec ~ 2700msec
0	1	0	0	200msec ~ 650msec
0	1	0	1	200msec ~ 900msec
0	1	1	0	200msec ~ 1500msec
0	1	1	1	200msec ~ 2700msec
1	0	0	0	250msec ~ 650msec
1	0	0	1	250msec ~ 900msec
1	0	1	0	250msec ~ 1500msec
1	0	1	1	250msec ~ 2700msec
1	1	0	0	350msec ~ 650msec
1	1	0	1	350msec ~ 900msec
1	1	1	0	350msec ~ 1500msec
1	1	1	1	350msec ~ 2700msec

**SW-H1 No. 5 Reserved**

Set to "0".

**SW-H1 No. 6 Busy tone detect continuation sound detect**

Used to select detection of the continuous sound of certain frequency.

**SW-H1 No. 7 Reserved**

Set to "0".

**SW-H1 No. 8 Busy tone detect intermittent sound detect**

Used to select detection of the intermittent sound of certain frequency.

**SW-H2 No. 1, No. 2 Busy tone detect pulse number**

Used to set detection of Busy tone intermittent sounds.

**SW-H2 No. 3 Fax switching when A.M. full**

If the answering machine's memory (tape) is full and there is no response, the machine automatically switches to Fax reception.

**SW-H2 No. 4 ~ No. 7 Reserved**

Set to "0".

**SW-H2 No. 8 Busy tone continuous sound detect time**

Set detecting time busy tone continuous sound for 5 or 10 seconds.

**SW-I1 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-I2 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-I3 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-I4 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-I5 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-I6 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-I7 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-J1 No. 1 Activity report print**

This soft switch is used to select: whether or not to print out the activity report when the memory is full. An activity report can be printed when the following key entry command is made.

"FUNCTION ", "▼", "▶", "▶"

After producing the activity report, all the data in the memory will be cleared.

When the switch function is set to "0" (no), the data in the memory will be deleted from the oldest as it reaches the maximum memory capacity.

**SW-J1 No. 2 Total communication hours and pages print**

Used to make a choice of whether the total communication time and pages are recorded in the activity report.

**SW-J1 No. 3 Sender's phone number setting**

Used to make a choice of whether the registered sender's phone number can be changed or not. If the switch is set to "1", new registration of the sender's phone number is disabled to prevent accidental wrong input.

**SW-J1 No. 4, No. 5 Reserved**

Set to "0".

**SW-J1 No. 6 Summer time setting**

This is used to set YES/NO of automatic clock adjustment for European Summer time.

**SW-J1 No. 7, No. 8 Ringer volume**

Used to adjust ringing volume.

**SW-J2 No. 1, No. 2 Speaker volume (3 stages)**

Used to adjust sound volume from a speaker.

**SW-J2 No. 3 Polling key**

If this switch is set to 1, the last of Rapid key works as polling key.

**SW-J2 No. 4, No. 5 Handset receiver volume**

Used to adjust sound volume from a handset receiver volume.

**SW-J2 No. 6 ~ No. 8 Reserved**

Set to "0".

**SW-J3 No. 1 Reserved**

Set to "0".

**SW-J3 No. 2 ~ No. 4 Communication result printout (Transaction report)**

Every communication, the result can be output. As usual, it is set to print the timer sending communication error alone. If No. 2: 0 No. 3: 1 No. 4: 0 are set, printing is always on (printed even if it is normally ended).

000: Error, timer and memory sending/receiving

001: Sending

010: Continuous printing

011: Not printed

100: Communication error

**SW-J3 No. 5 ~ No. 8 Reserved**

Set to "0".

**SW-K1 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-L1 No. 1 ~ No. 4 Reserved**

Set to "0".

**SW-L1 No. 5 Cut off mode (COPY mode)**

Whether the excessive part is printed on the next recording paper or discarded is selected to copy a document which is longer than the recording paper.

**SW-L1 No. 6 A4 Paper enable**

The use of recording paper of A4 is enabled.

**SW-L1 No. 7 LEGAL and LETTER paper enable**

The use of recording paper of LEGAL and LETTER is enabled.

**SW-L1 No. 8 Reserved**

Set to "0".

**SW-L2 No. 1, No. 2 Paper set size**

At present size of the recording paper.

**SW-L2 No. 3 Automatic reduce of receive**

If set to 1, it is reduced automatically when receiving.

**SW-L2 No. 4 ~ No. 8 Reserved**

Set to "0".

**SW-M1 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-M2 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-N1 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-N2 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-N3 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-O1 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-O2 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-O3 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-O4 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-O5 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-O6 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-P1 No. 1 ~ No. 8 Reserved**

Set to "0".

**SW-P2 No. 1 Reserved**

Set to "1".

**SW-P2 No. 2, No. 3 Reserved**

Set to "0".

**SW-P2 No. 4, No. 5 Reserved**

Set to "1".

**SW-P2 No. 6, No. 7 Reserved**

Set to "0".

**SW-P2 No. 8 Reserved**

Set to "1".

**SW-P3 No. 1 Reserved**

Set to "1".

**SW-P3 No. 2 Reserved**

Set to "0".

**SW-P3 No. 3 Reserved**

Set to "1".

**SW-P3 No. 4 ~ No. 6 Reserved**

Set to "0".

**SW-P3 No. 7 Reserved**

Set to "1".

**SW-P3 No. 8 Reserved**

Set to "0".

**SW-P4 No. 1 Reserved**

Set to "0".

**SW-P4 No. 2 Reserved**

Set to "1".

**SW-P4 No. 3 Reserved**

Set to "0".

**SW-P4 No. 4 ~ No. 7 Reserved**

Set to "1".

**SW-P4 No. 8 Reserved**

Set to "0".

**SW-P5 No. 1 Reserved**

Set to "1".

**SW-P5 No. 2 Reserved**

Set to "0".

**SW-P5 No. 3 Reserved**

Set to "1".

**SW-P5 No. 4 ~ No. 6 Reserved**

Set to "0".

**SW-P5 No. 7 Reserved**

Set to "1".

**SW-P5 No. 8 Reserved**

Set to "0".

**SW-P6 No. 1 Ink save mode**

If set to "1", printing is done with half of ink.

**SW-P6 No. 2 ~ No. 8 Reserved**

Set to "0".

**SW-P7 No. 1 ~ No. 8 Reserved**

Set to "0".

### [3] Troubleshooting

Refer to the following actions to troubleshoot any of the problems mentioned in 1-4.

[1] A communication error occurs.

[2] Image distortion produced.

[3] Unable to do overseas communication.

[4] Communication speed slow due to FALLBACK.

- Increase the transmission level SOFT SWITCH A4-1, 2, 3, 4, 5.  
May be used in case [1] [2] [3].
- Decrease the transmission level SOFT SWITCH A4-1, 2, 3, 4, 5. May be used in case [3].

- Apply line equalization SOFT SWITCH A5-1, 2.  
May be used in case [1] [2] [3] [4].
- Slow down the transmission speed SOFT SWITCH A2-1, 2, 3, 4. May be used in case [2] [3].
- Replace the TEL/LIU PWB.  
May be used in all cases.
- Replace the control PWB.  
May be used in all cases.

\* If transmission problems still exist on the machine, use the following format and check the related matters.

TO: \_\_\_\_\_ ATT: \_\_\_\_\_ Ref.No.: \_\_\_\_\_

\* Please complete this report before calling the "TAC" hotline if problem still occurs.

## [4] Error code table

### 1. Communication error code table

#### G3 Transmission

Code	Final received signal	Error Condition (Receiver side)
0	Incomplete signal frame	Cannot recognize bit stream after flag
1	NSF, DIS	Cannot recognize DCS signal by echo etc. Cannot recognize NSS signal (FIF code etc)
2	CFR	Disconnects line during reception (carrier missing etc)
3	FTT	Disconnects line by fall back
4	MCF	Disconnects line during reception of multi page Cannot recognize NSS, DCS signal in the case of mode change
5	PIP or PIN	The line is hung up without replying to telephone request from the receiving party.
6	RTN or RTP	Cannot recognize NSS, DCS signal after transmit RTN or RTP signal.
7	No signal or DCN	No response in receiver side or DCN signal received* (transmitter side)
8	–	Owing to error in some page the error could not be corrected although the specified number of error retransmissions were attempted.
11	–	Error occurred after or while reception by the remote (receiving) machine was revealed to be impossible.
12	–	Error occurred just after fallback.
13	–	Error occurred after a response to retransmission end command was received.

#### G3 Reception

Code	Final received signal	Error Condition (Receiver side)
0	Incomplete signal frame	Cannot recognize bit stream after flag
1	NSS, DCS	Cannot recognize CFR or FTT signal Disconnects line during transmission (line error)
2	NSC, DTC	Cannot recognize NSS signal (FIF code etc)
3	EOP	Cannot recognize MCF, PIP, PIN, RTN, RTP signal
4	EOM	Cannot recognize MCF, PIP, PIN, RTN, RTP signal in the case of mode change
5	MPS	The line is hung up without replying to communication request.
6	PR1-Q	Cannot recognize PIP, PIN signal in the case of TALK request
7	No signal or DCN	No response in transmitter (cannot recognize DIS signal) or DCN signal received* (receiver side)
8	–	Error occurred upon completion of reception of all pages.
9	–	Error occurred when mode was changed or Transmission/Reception switching was performed.
10	–	Error occurred during partial page or physical page reception.
11	–	Error occurred after or during inquiry from the remote (transmitting) machine as to whether reception is possible or not.
12	–	Error occurred during or just after fallback.
13	–	Error occurred after the retransmission end command was received.

# CHAPTER 3. MECHANISM BLOCKS

## [1] General description

### 1. Document feed block and diagram

Fig. 1

### 2. Document feed operation

- 1) The original, which is set in the document hopper, feeds automatically when the front sensor is activated. This in turn activates the drive motor which drives the paper feed roller. The document stops when the lead edge is detected by the original sensor.
- 2) The lead edge of the original is fed a specified number of pulses after the lead edge of the document is detected for the reading process to begin.
- 3) The trailing edge of the original is fed a specific number of pulses after the trailing edge of the document deactivates the original sensor. The read process then stops and the original is discharged.
- 4) When the front sensor is in the OFF state (any document is not set up in the hopper guide), the drive will be stopped when the document is discharged.

## 3. Hopper mechanism

### 3-1. General view

Fig. 2

The hopper section contains document guides that are used to adjust the hopper to the width of the original document. This ensures that the original feeds straight into the fax machine for scanning.  
Document width: 148 mm to 216 mm (A5 longitudinal size to Letter longitudinal size)

NOTE: Adjust the document guide after setting up the document.

### 3-2. Automatic document feed

- 1) Use of the paper feed roller and separate plate ensures error-free transport and separation of documents. The plate spring presses the document to the paper feed roller to assure smooth feeding of the document.
- 2) Document separation method: Separate plate

Fig. 3

### 3-3. Documents applicable for automatic feed

	20 sheets	1 sheet(Manual)
Paper weight	70 kg 21.5 lbs. (80 g/m <sup>2</sup> )	70 kg ~ 135 kg 14 lbs. ~ 42 lbs. (52 g/m <sup>2</sup> ~ 157g/m <sup>2</sup> )
Paper thickness (ref.)	0.1 mm	0.1 mm ~ 0.18mm
Paper size	LGL (216 mm x 355.6 mm) A4 (210 mm x 297 mm) LTR (216 mm x 279 mm)	
Feeder capacity	A4/LTR: 20 sheets LGL : 5 sheet	

NOTE: Double-side coated documents and documents on facsimile recording paper should be inserted manually. The document feed quantity may be changed according to the document thickness.

Documents corresponding to a paper weight heavier than 70 kg (81.4g/m<sup>2</sup>) and lighter than 135 kg (157 g/m<sup>2</sup>) are acceptable for manual feed.

Documents heavier than 135 kg in terms of the paper weight must be duplicated on a copier to make it operative in the facsimile.

### 3-4. Loading the documents

- 1) Make sure that the documents are of suitable size and thickness, and free from creases, folds, curls, wet glue, wet ink, clips, staples and pins.
- 2) Place documents face down in the hopper.
  - i) Adjust the document guides to the document size.
  - ii) Align the top edge of documents and gently place them into the hopper. The first page under the stack will be taken up by the feed roller to get ready for transmission.

NOTES: 1) Curled edge of documents, if any, must be straightened out.

- 2) Do not load the documents of different sizes and/or thicknesses together.

Fig. 4

### 3-5. Documents requiring use of document carrier

- 1) Documents smaller than 148mm (W) x 140mm (L).
  - 2) Documents thinner than the thickness of 0.06mm.
  - 3) Documents containing creases, folds, or curls, especially those whose surface is curled (maximum allowable curl is 5mm).
  - 4) Documents containing tears.
  - 5) Carbon-backed documents. (Insert a white sheet of paper between the carbon back and the document carrier to avoid transfer of carbon to the carrier.)
  - 6) Documents containing an easily separable writing material (e.g., those written with a lead pencil).
  - 7) Transparent documents.
  - 8) Folded or glued documents.
- Document in document carrier should be inserted manually into the feeder.

## 4. Document release

### 4-1. General

To correct a jammed document or to clean the document running surface, pull the insertion side of document center of the operation panel. To open the upper document guide, the operation panel must be opened first.

## 5. Recording block

- 1) The pulse motor is rotated by the PICK UP ROLLER to feed the recording sheet. The SEPARATE RUBBER feeds one by one from the top sheet.
- 2) The recording sheet contacts the P-IN SENSOR.
- 3) The FEED ROLLER rotates in the reverse direction of paper feed (refer to the figure of PICK UP ROLLER). The tip of recording sheet is set parallel to the FEED ROLLER when it reaches to the FEED ROLLER and the PRESS ROLLER after through the PICK UP ROLLER.
- 4) Then the FEED ROLLER rotates in the paper feed direction to feed the recording sheet downwards. (refer to the figure of PAPER FEED)
- 5) The CARTRIDGE prints the recording sheet, which is then ejected by the EXIT ROLLER and STAR WHEEL.

Fig. 5

## [2] Ink jet printer

### 1. Engine specifications

#### 1) Mechanism

Resolution: 600dpi x 600dpi addressability  
Print speed: 4PPM text with black cartridge  
Print swath: 8 inches  
Duty cycle: 250 pages per month average  
Dimensions: 330mm x 100mm x 130mm  
Weight: 1.98punds(900g)(1p=453g)  
Acoustics: 50db in letter quality mode

#### 2) Electrical

No electrical hardware included with the type B engine except for the carrier drive stepping motor, the Sensor FPC assembly which includes a photo interrupter for sensing home position, the carrier cables, and the printhead cable.

### 2. Abbreviations

EOF	End-of Form
ESD	Electrostatic Discharge
FRU	Field Replaceable Unit
HVPS	High Voltage Power Supply
LVPS	Low Voltage Power Supply
OEM	Original Equipment Manufacturer
POST	Power-On Self Test
V ac	Volts alternating current
V dc	Volts direct current
ZIF	Zero Insertion Force

### 3. Diagnostic information

#### 1) Print Cartridge

Black Print Cartridge 208 Nozzles  
Pigment based(Water proof)  
initial cartridge  
Approx.yield 300 letter pages at 4%coverage  
Replacement cartridge:SHARP UX-C70B  
Approx.yield 600 letter pages at 4%coverage  
\* When Ink Save mode is enabled.

#### 2) Start

##### Power-OnSelf Test (POST) Sequence

When you turn the printer on it performs a POST. Turn the machine on and check for a correct POST operation by observing the following:

1. The carrier moves.
2. The paper feed gears turn.
3. After 30 seconds the carrier moves over the maintenance station and caps the printhead.
4. All motors stop.

### 4. Circuit description

#### 1) General description

The compact design of INK PWB is obtained by using Head Driver IC and Home position Sensor.

#### 2) Electrical System

The PWB provides mechanical control for Ink Jet Printer.

Fig. 1 shows the interconnection of PWB and other electrical component in the print mechanism.

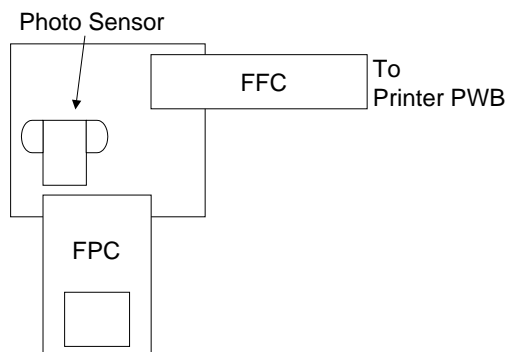

Fig. 1

#### 3) Electrical Overview

The information in this section appears in a sequence relative to the system diagram in the following figure.

Fig. 2

#### 4) Power Supply Connector

The mechanism requires two voltages (+3.3V, +11.82V and +24V). These three voltages supplied from CNHEAD connector.

#### 5) Host interface connector

FFC on the INK PWB provides 23 lines from the host unit, for control of various operating options available to the host. The two primary functions of the host interface are:

- Printing data for the Ink Jet Printer
- Error status to the host

#### 6) Driver IC

One driver IC drive 208 (MONO) nozzles on the cartridge. This driver IC, located on the INK PWB, also connected back to the ASIC, on Printer PWB.

#### 7) INK Cartridge Carriage

The carriage connects via a FPC on the INK PWB. The ink cartridge contacts connect to the carriage contacts. The ASIC controls the carriage and ink cartridge.

#### 8) Home Position

Measure the position of the carrier unit by reading the scale of the encoder (① in the figure) with the photo sensor (② in the figure). When power is supplied, the carrier unit moves right until it contacts the dead-end of the right main frame (③ in the figure). We call this home position and hereinafter, regard as the starting point to measure the position of the carrier unit by reading the scale of the encoder with the photo sensor. The home position shall be applied to all operations.

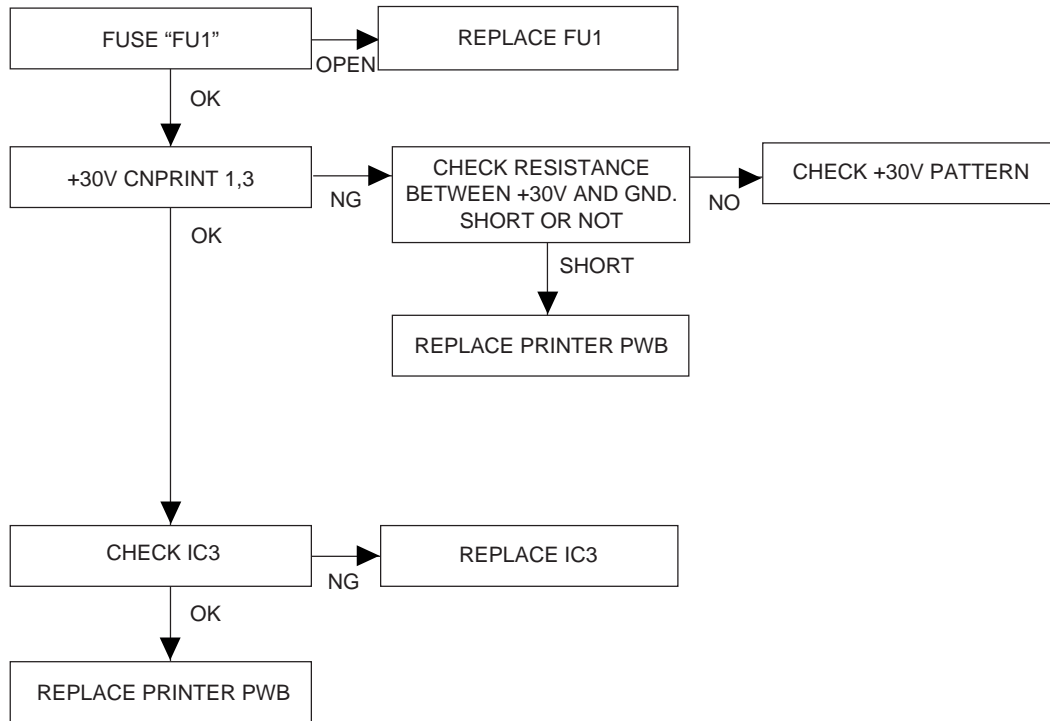

Fig. 3

## 5. Overall troubleshooting of Printer

- BOTH CARRIAGE MOTOR AND FEED MOTOR ARE NG.**

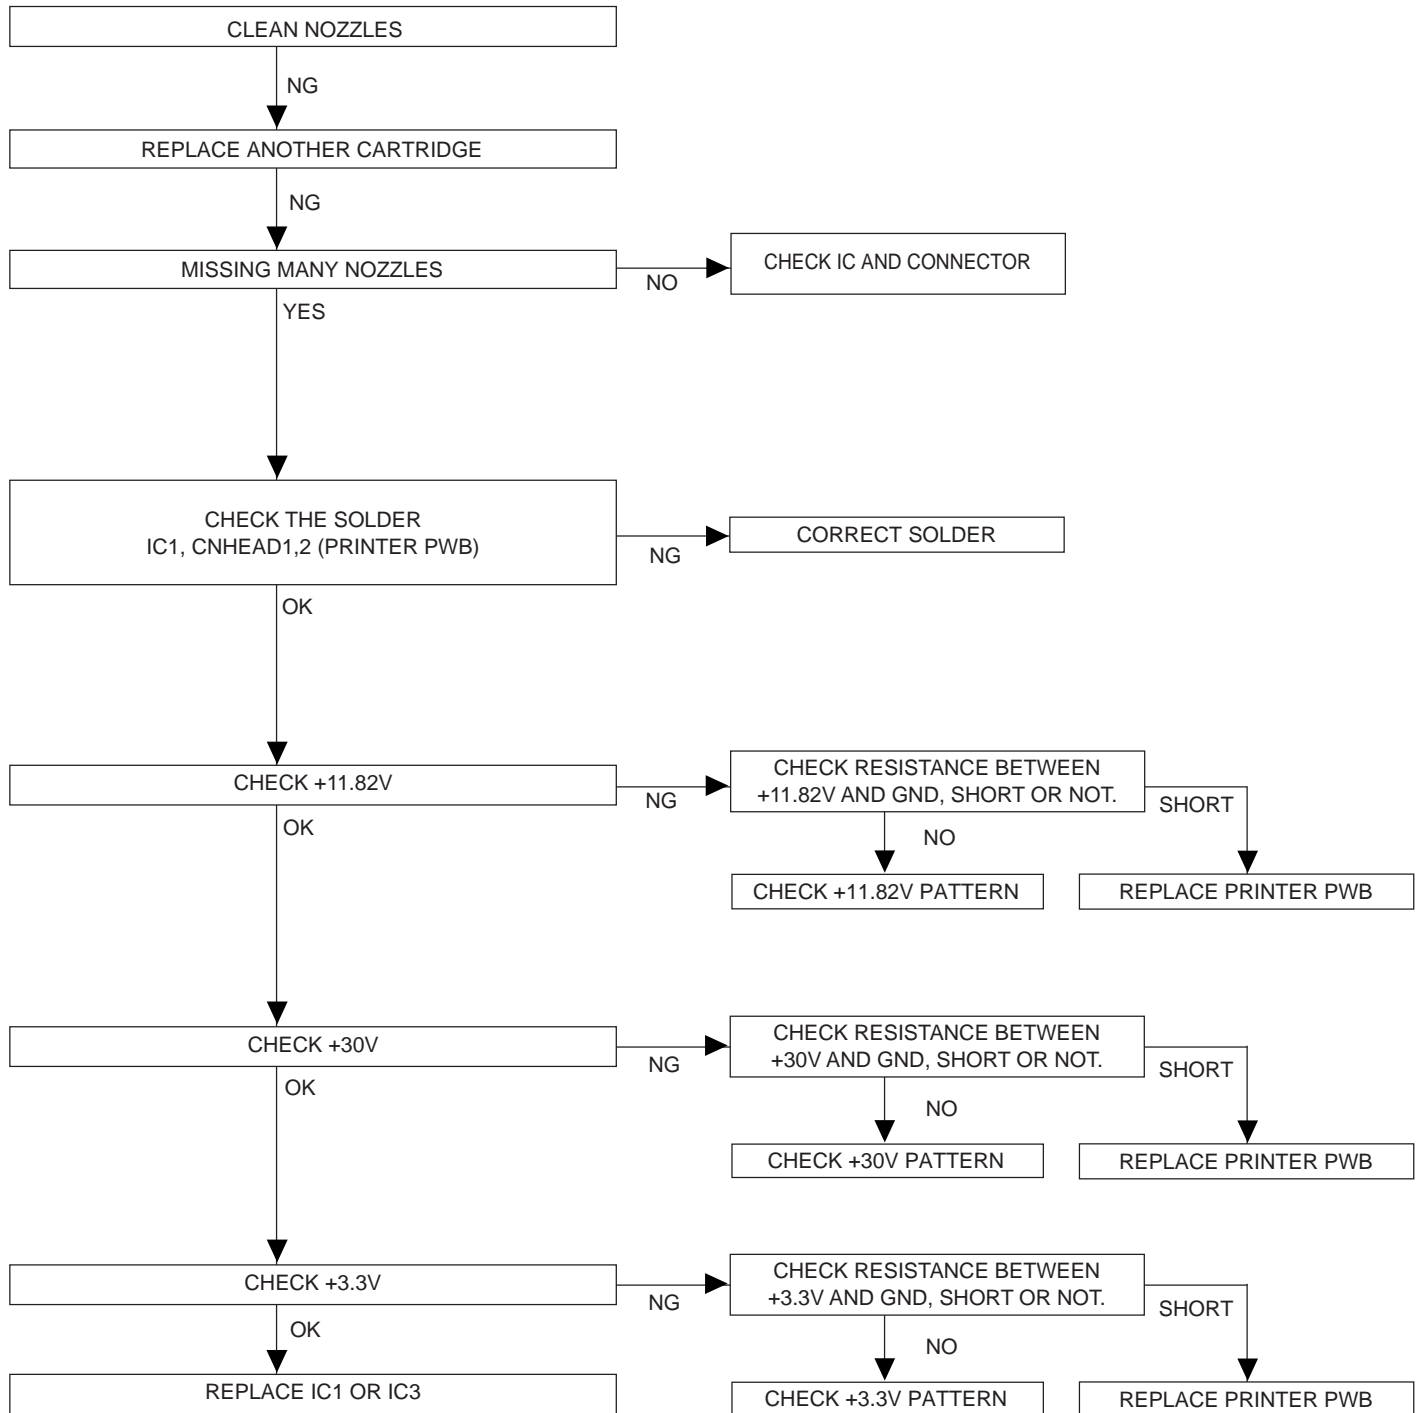

- FEED MOTOR IS NG (CARRIAGE MOTOR IS GOOD)**

- CARRIAGE MOTOR IS NG (FEED MOTOR IS GOOD)**

• MISSING NOZZLES (RESULT OF CHECK PATTERN OR CLEAN NOZZLES)

[3] Disassembly and assembly procedures

- This chapter mainly describes the disassembly procedures. For the assembly procedures, reverse the disassembly procedures.
- Easy and simple disassembly/assembly procedures of some parts and units are omitted. For disassembly and assembly of such parts and units, refer to the Parts List.
- The numbers in the illustration and the parts list in a same section are common to each other.
- To assure reliability of the product, the disassembly and the assembly procedures should be performed carefully and deliberately.

CHAPTER 4. DIAGRAMS

[1] Block diagram

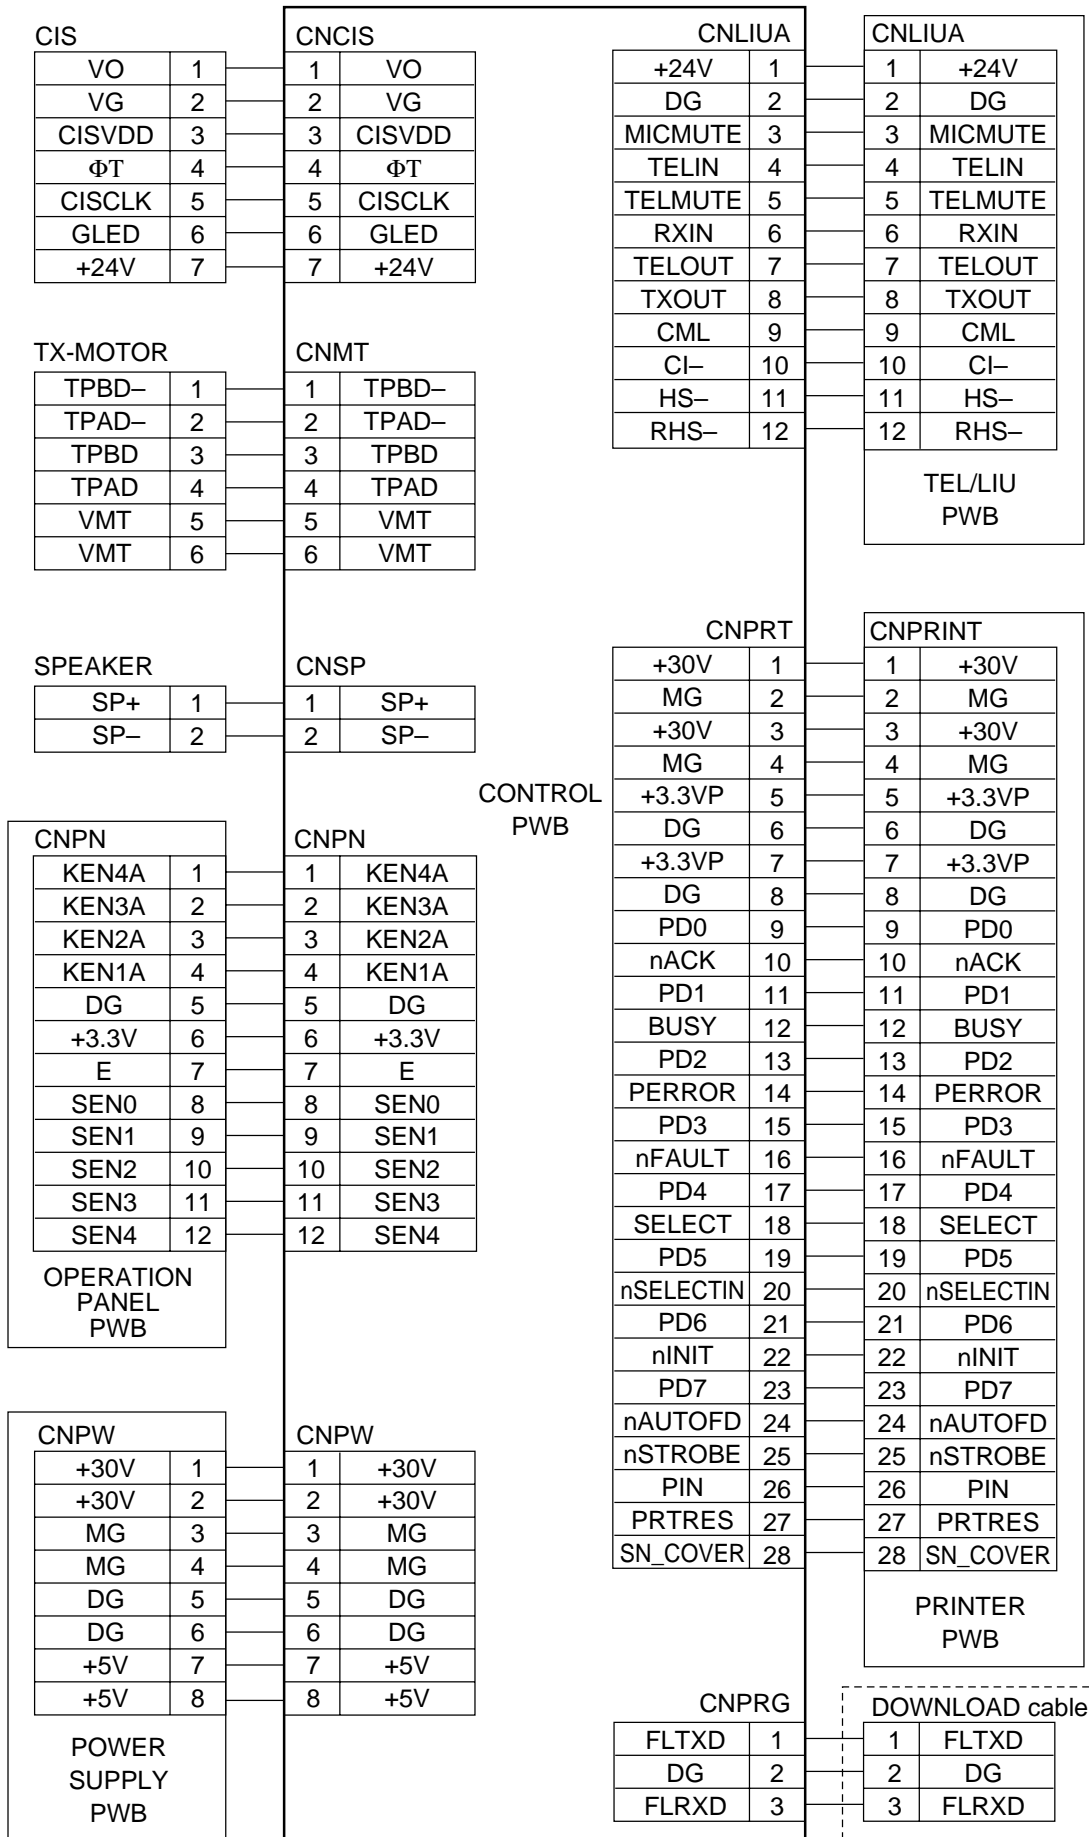

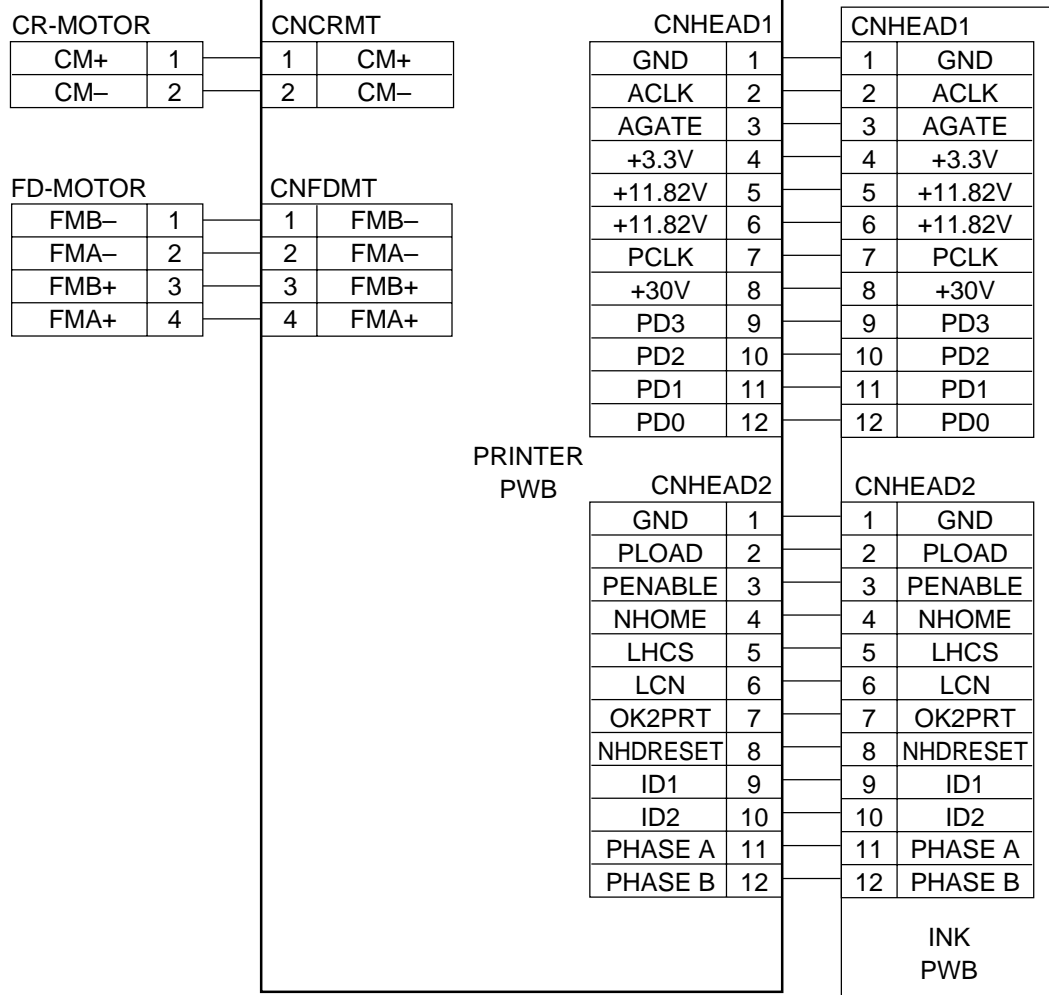

## [2] Wiring diagram

### [3] Point-to-point diagram

## CHAPTER 5. CIRCUIT DESCRIPTION

### [1] Circuit description

#### 1. General description

The compact design of the control PWB is obtained by using CONEXANT fax engine in the main control section and high density printing of surface mounting parts. Each PWB is independent according to its function as shown in Fig. 1.

#### 2. PWB configuration

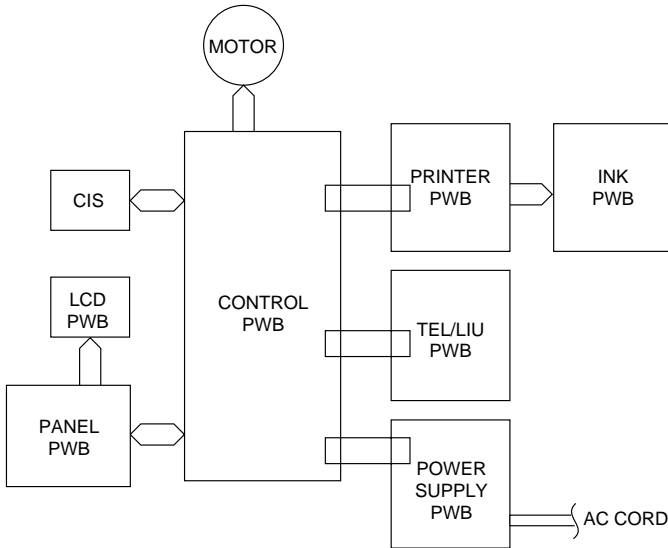

Fig. 1

#### 1) Control PWB

The control PWB controls peripheral PWBs, mechanical parts, transmission, and performs overall control of the unit.

This machine employs a 1-chip modem (SCE214) which is installed on the control PWB.

#### 2) TEL/LIU PWB

This PWB controls connection of the telephone line to the unit.

#### 3) Power supply PWB

This PWB provides voltages of +5V and +30V to the other PWBs.

#### 4) Panel PWB

The panel PWB allows input of the operation keys.

#### 5) LCD PWB

This PWB controls the LCD display.

#### 6) Printer PWB

This PWB controls printer machine.

#### 7) Ink PWB

This PWB controls Ink cartridge.

### 3. Operational description

Operational descriptions are given below:

- Transmission operation

When a document is loaded in stand-by mode, the state of the document sensor is sensed via the 1 chip fax engine (SCE214). With depression of the START key in the off-hook state, transmission takes place. Then, the procedure is sent out from the modem and the motor is rotated to move the document down to the scan line. In the scan processor, the signal scanned by the CIS is sent to the internal image processor and the AD converter to convert the analog signal into binary data. This binary data is transferred from the scan processor to the image buffer within the RAM and encoded and stored in the transmit buffer of the RAM. The data is then converted from parallel to serial form by the modem where the serial data is modulated and sent onto the line.

- Receive operation

There are two ways of starting reception, manual and automatic. Depression of the START key in the off-hook mode in the case of manual receive mode, or CI signal detection by the LIU in the automatic receive mode.

First, the SCE214 controls the procedure signals from the modem to be ready to receive data. When the program goes into phase C, the serial data from the modem is converted to parallel form in the modem interface of the 1 chip fax engine (SCE214) which is stored in the receive buffer of the RAM. The data in the receive buffer is decoded software-wise to reproduce it as binary image data in the image buffer. The data is DMA transferred to the recording processor within the SCE214 which is then converted from parallel to serial form to be sent to the Hurricane on the printer PWB. Hurricane control the printing system.

- Copy operation

To make a copy on this facsimile, the COPY key is pressed when the machine is in stand-by with a document on the document table and the telephone set is in the on-hook state. First, depression of the COPY key advances the document to the scan line. Similar to the transmitting operation, the image signal from the CIS is converted to a binary signal in the DMA mode via the 1 chip fax engine (SCE214) which is then sent to the image buffer of the RAM. Next, the data is transferred to the recording processor to send the image data to Hurricane and then to the INK cartridge which is printed line by line. The copying takes place as the operation is repeated.

## [2] Circuit description of control PWB

### 1. General description

Fig. 2 shows the functional blocks of the control PWB, which is composed of 5 blocks.

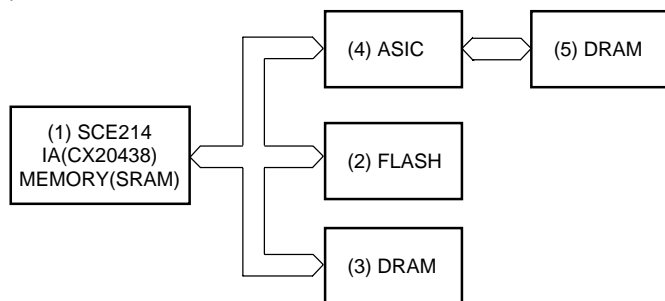

Fig. 2 Control PWB functional block diagram

### 2. Description of each block

#### (1) Main control block

The main control block is composed of CONEXANT 1 chip fax engine (SCE214), FLASH (4Mbit x 2), DRAM (16Mbit), ASIC ( $\mu$ PD65944). Devices are connected to the bus to control the whole unit.

##### 1) SCE214 (IC16) : pin-176 QFP (FAX CONTROLLER)

1 chip fax engine has internal integrated analog (20438) and internal memory (SRAM : 32kbit).

##### 2) LH28F400BVE-TL85 (IC5, 6): pin-48 TSOP (FLASH)

(IC5)FLASH of 4Mbit equipped with software for the main CPU.  
(IC6)FLASH of 4Mbit equipped with MEMORY for registration data.

##### 3) IS41LV8205 (IC4): pin-28 SOJ (DRAM)

Image memory for recording process.

- Memory for recording pixel data without paper.
- Memory for system work and ECM receive buffer.

##### 4) $\mu$ PD65944 (IC12): pin-100 QFP (ASIC)

ASIC between SCE214 and Hurricane.

It converts the resolution and the aspect ratio of the serial scanning data sent by SCE214 and sends the converted data to Hurricane by parallel IF.

##### 5) MSM51V4800E (IC19): pin-28 SOJ (DRAM)

Dedicated image buffer for ASIC (IC12).

### (2) IC16 (SCE214) Hardware description

#### 1) Integrated Controller (SCC)

The Controller contains an internal MC24 Processor with a 16-MB address space and dedicated circuitry optimized for facsimile image processing and monitoring and for thermal or thermal transfer printer support.

The CPU provides fast instruction (up to 10 MHz clock speed) execution and memory efficient input/output bit manipulation. The CPU connects to other internal functions over an 8-bit data bus and 24-bit address bus and dedicated control lines.

The 24-bit external address bus, 8-bit data bus, control, status and decoded chip select signals support connection to external DRAM, and FLASH memory.

#### 2) DRAM Controller

The CX06835 includes a DRAM controller with signal and page mode access support which supports fast, normal, or slow refresh time. DRAM memory space is provided in one block up to 4 MB. A maximum of 4 MB of DRAM is supported. This space has a programmable size and starting address. Refresh is performed automatically and is supported in stand-by mode. CAS and RAS signal support is provided for one-DRAM banks for both 4-bit and 8-bit organizations. Access speeds from 50ns to 70ns can be supported.

### 3) DMA Channels

Six internal DMA channels support memory access for scanner, T.4/T.6, and resolution conversion. DMA Channel 2 can be reprogrammed for external access to thermal printing, thermal transfer, or plain paper inkjet printing.

### 4) External RAM and ROM

Moveable and programmable size external SRAM memory of up to 1 MB, DRAM memory of up to 4 MB, and ROM of up to 2 MB can be directly connected to the SCE214. By using an external address decoder, the size of SRAM and/or ROM can be extended. The ROM stores all the program object code.

### 5) Flash Memory Controller

The SCE214 includes a flash memory controller that supports NOR, NAND, and Serial NAND-type flash memory. The supported size of NOR-type memory is up to 1 MB and the supported size of NAND-type memory is unlimited.

### 6) Stepper Motor Control

Eight outputs are provided to external current drivers: four to the scanner motor and four to the printer motor. The stepping patterns are programmable and selectable line times are supported. A timeout circuit controls the power control of the motors. The printer or scanner motor outputs can be programmed as GPOs for applications using single motor or paper printers.

### 7) T.4/T.6 Compressor/Decompressor

MH, MR and MMR compression and decompression are provided in hardware. T.4 line lengths of up to 8192 pixels are supported. MMR and Alternating Compression/Decompression (ACD) on a line by line basis provide support for up to three independent compression and decompression processes.

### 8) Bi-level Resolution Conversion

One independent programmable bi-level 1D-resolution conversion block is provided to perform expansion or reduction on the T.4 decompressed data and scan image data. Image expansion can be programmed up to 200% and reduction down to 33%. Vertical line ORing and data output bit order reversal is also provided.

### 9) Printer IF

The Printer Interface provides a standard connection between the SCE214 and a thermal printhead to support thermal printing or thermal transfer. The thermal printer interface consists of programmable data, latch, clock, and up to four strobe signals. Programmable timing supports traditional thermal printers, as well as the latchless split mode printers, and line lengths of up to 2048 pixels. Line times from 5 ms to 40 ms are supported.

The SCE214 includes a thermal ADC (TADC) function utilizing a D/A converter and a comparator to monitor the printhead temperature. External terminating resistors must be supplied; the values are determined by the specific printhead selected.

As an option, plain paper inkjet printing can be supported.

### 10) Scanner and Video Control

Five programmable control and timing signals support common CCD and CIS scanners. The video control function provides signals for controlling the scanner and for processing its video output. Three programmable control signals (START, CLK1n, and CLK2) provide timing related to line and pixel timing. These are programmable with regard to start time, relative delay and pulse width.

Two video control output signals (VIDCTL[1:0]) provide digital control for external signal pre-processing circuitry. These signals provide a per pixel period, or per line period, timing with programmable polarity control for each signal.

## 11) Video Processing

The CX06835 supports two modes of shading correction for scanner data non-uniformity arising from uneven sensor output or uneven illumination. Corrections are provided on either an 8-pixel group or are applied separately to each pixel. Dark level correction and gamma correction are also provided.

Two-dimensional Error Diffusion/Dithering is performed on halftone images.

The CX06835 includes an 8 x 8 dither table, which is programmable and stored internally (8-bit per table entry). The table is arranged in a matrix of 8 rows by 8 columns. The video processing circuit provides mixed-mode detection/processing and multi-level Resolution Conversion for the scanner multi-level data. The conversion ratio of the multi-level Resolution Conversion is fixed to B4-A4 conversion.

## 12) Operator Panel Interface

Operation Panel functions are supported by the operator output bus OPO[6:0], the operator input bus OP[3:0], and two control outputs (LCDCS and LEDCTRL).

The CX06835 can directly interface to a 28-key keypad.

A 2-line LCD display module with 20 characters per line can be supported.

## 13) Synchronous Serial Interface (SSIF)

One or optionally two Synchronous only Serial Interfaces (SSIF) are built into the CX06835, which allows it to communicate with external peripherals. Each SSIF provides separate signals for Data (SSTXD, SSRXD), Clock (SSCLK), and Status (SSSTAT). Each SSIF is a duplex, three-wire system. The SSIF may be configured to operate as either a master or a slave interface. The bit rate, clock polarity, clock phase, and data shifting order are programmable.

## 14) Synchronous/Asynchronous Serial Interface (SASIF)

One or optionally two Synchronous/Asynchronous Serial Interface (SASIF) performs the following:

- Serial-parallel conversion of data received from a peripheral device.
- Parallel-to-serial conversion of data for transmission to a peripheral device.

This interface consists of serial transmit data (SASTXD), serial receive data (SASRXD), and a serial clock(SASCLK). The SASIF includes a programmable bit rate generator for asynchronous and synchronous operations. The data shifting order, data bit number, and the SASCLK polarity are programmable.

The optional SASIF 2 has an additional pin called DSS\_AVAIL. This signal can be used to tristate the SASCLK2 and SASTXD2 signals.

## 15) Real Time Clock (RTC)

The CX06835 includes a battery backup real time clock. The RTC will automatically maintain the proper date and time for 32 years. Leap year compensation is included. A 32.768 kHz or 65.536 kHz crystal is required by the RTC.

## 16) Tone Generator (ALT\_TONE)

The CX06835 provides a programmable tone generator output. The frequency of the tone generator is programmable from 400 Hz to 4 kHz. By using a PWM programmable high frequency as a modulation frequency, the output level can be made programmable.

## 17) Watchdog Timer

The Programmable Watchdog Timer is intended to guard against firmware lockup on the part of either executive-controlled background tasks or interrupt-driven tasks, and can only be enabled by a sequence of events under control of the Watchdog Control Logic. Once the Watchdog Timer has been enabled, it can not be disabled unless a system reset occurs.

## 18) Reset and Power Control

The RESETn I/O pin provides an internally generated reset output to external circuits, or it can accept an externally generated reset signal. This reset signal will not reset the RTC. Separate RTC battery power inputs are provided for battery-backup functions. A BATRSTn pin is provided, which resets the RTC circuits and other SCC circuits.

## 19) Power Up/Down Control

Power Up/Down detection is provided internally. The threshold voltages are:

- Power Up detection level = 2.83V to 2.95V.

An internally generated power down signal controls internal switching between primary and battery power. This control signal is also provided as an output on the PWRDWNn pin. An externally generated power down detector (optional) can be provided as an input on the PWRDWNn pin by setting the INTPWRDWNEn pin.

## 20) Stand-by and Sleep Modes

Two power saving modes are provided to reduce the power consumption. In stand-by mode, the CPU is functional, but the modem clock is turned off to save power. When this occurs, the modem may be activated by software under different conditions. In sleep mode, the clock is cut off from both the modem and the CPU to increase the power savings.

The system can be activated by paper insertion, key pressing events, and telephone ring detection.

## 21) Embedded Modem DSP

The embedded modem DSP is a synchronous 9600 bps half-duplex modem with error detection and DTMF generation/reception. It provides data transmission/reception from regular PSTN lines, PBX, or private lines.

The modem can operate at any standard V.29 data speed up to 9600 bps as well as in V.21 and V.23 modes.

The modem is designed for use in Group 3 facsimile machines. It satisfies the requirements specified in ITU-T recommendations V.29, V.27ter, V.21 Channel 2, and T.4, and meets the signaling requirements of T.30. It also performs HDLC framing according to T.30 at all speeds.

Note: For technical details, refer to the FM209/FM214 Designer's Guide, (document 1175).

## 22) Software and Firmware Support Features

Available software and embedded firmware provides the following:

- Modem support for speeds up to 9600 bps.
- ECM under conditional assembly.
- DRAM memory support under conditional assembly.
- MH, MR and MMR support.
- Page memory receiving.
- 5ms minimum scan line time.
- Conditional Error Diffusion or Dither table (8x8) support.
- Dark Level Correction support.
- Single motor support.
- 28-key operator panel support.
- Call progress support for Europe and U.S.A.
- Monochrome inkjet print engine support.

### (3) Panel control block

The following controls are performed by the SCE214.

- Operation panel key scanning
- Operation panel LCD display

### (4) Mechanism/recording control block

- Recording control block diagram

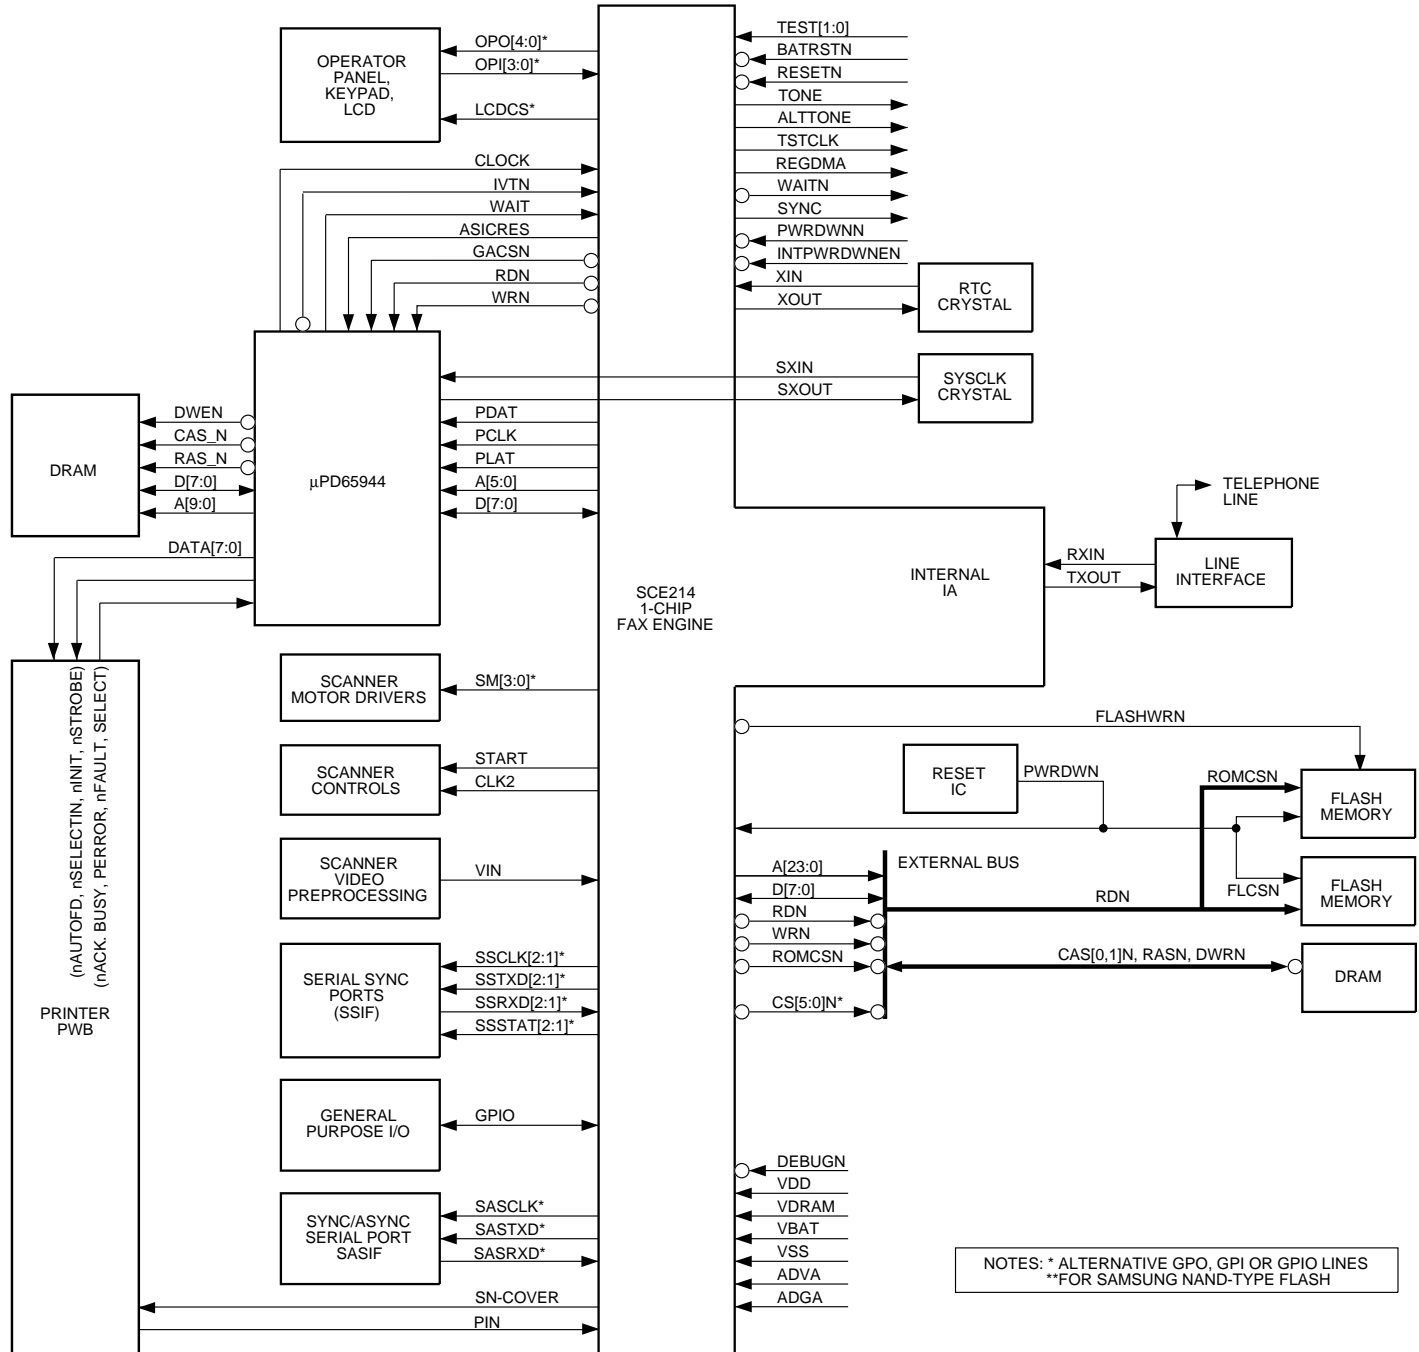

Fig. 3

**(5) Modem block (CX20438)****Integrated Analog Control Registers for CX20438**

The CX20438 IA can be used as a Primary Integrated Analog (PIA) codec or as a Secondary Integrated Analog (SIA) codec, depending on the signal connection with the SCE Controller ASIC device. In the SCE100 product, both the PIA and the SIA are packaged external to the SCE Controller device, whereas in the SCE209, the PIA is packaged with the SCE209 Controller and the SIA is external.

The CX20438 IA provides gain, filtering, internal analog switching, and an internally sourced microphone bias output. The IA is controlled by three control registers and an address register located in internal RAM space which are accessed via the modem interface memory. These registers provide individual controls for the IA's inputs, outputs, gain settings, and switching.

The registers are located in internal DSP RAM. Each bit of each 8-bit IA control register has exactly the same meaning for the PIA and the SIA. The LSB of each 16-bit address contents is used to control the PIA. The MSB of each 16-bit address contents is used to control the SIA.

The following table the PIA/SIA control register RAM access code.

Register	SBRAMx	BRx	Crx	IOx	AREXx	ADDx	PIA Reg*	SIA Reg*
IACR1	0	0	0	0	0	D0	0	1
IACR2	0	0	0	0	0	D4	0	1
IACR3	0	0	0	0	0	D5	0	1
IAADD	0	0	0	0	0	CE	0, 1	0, 1
<b>NOTES:</b> *Registers to use when x=1. When x=2, add 10h.								

- For changes made to IACR1 to be effective, the host must write to IAADD with a value of 0002h.
- For changes made to IACR2 to be effective, the host must write to IAADD with a value of 0006h.
- For changes made to IACR3 to be effective, the host must write to IAADD with a value of 0007h.

Configuration default values are shown below.

DEFAULT VALUE			
CONFIGURATION	IACR1	IACR2	IACR3
V.17/V.33	1D9Eh	0008h	0000h
V.29	1D9Eh	0008h	0000h
V.27ter	1D9Eh	0008h	0000h
V.21 Ch. 2	1D9Eh	0008h	0000h
V.23/Caller ID	1D9Eh	0008h	0000h
Tone Transmit/Detect	1D9Eh	0008h	0000h
Voice/Audio Codec	0D16h	0008h	0000h
Speakerphone	0D16h	0008h	0000h

The following signal flow block diagram is for a signal IA and it applies to both PIA and SIA.

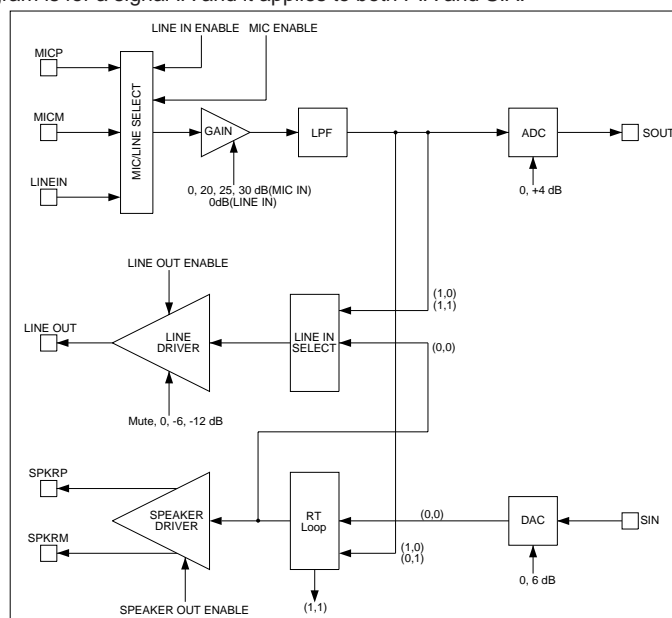

Fig. 4 PIA/SIA Signal Flow Control

## (6) IC12 (μPD65944) Hardware description

Serial data reception from FaxEngine  
FaxEngine external bus connection  
Resolution conversion/image zooming (70 % - 200 %)  
Main scan: 203.3 dpi → 600 dpi  
Sub scan: 97.79 dpi/195.58 dpi/391.16 dpi → 600 dpi  
Main scanning direction: print position centering  
Sub scanning direction: white skip  
Printing dot calculation  
Printing data: swath conversion  
Split printing  
IEEE1284 interface (commands/responses)  
Autonomous output of printing commands  
Buffer memory control (DRAM)/access arbitration

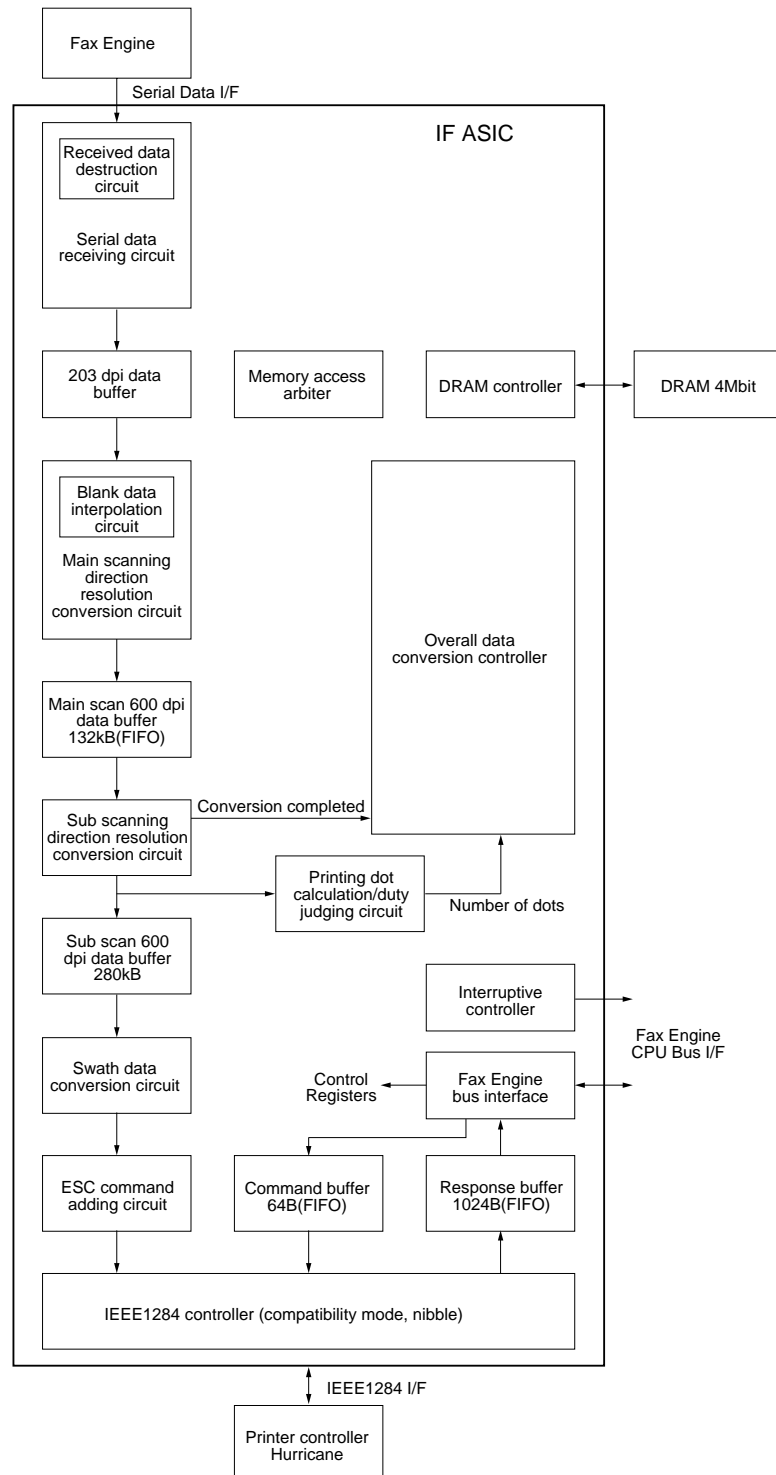

Fig. 5 Configuration of IF ASIC

		Serial data receiving circuit	203 dpi data buffer	Main scanning direction resolution conversion circuit	Main scan 600 dpi data buffer	Sub scanning direction resolution conversion circuit	Sub scan 600 dpi data buffer	Printing dot calculation circuit	Print duty judging circuit	Swath conversion circuit	ESC command adding circuit	Command transmission buffer	Response receiving buffer	IEEE1284 controller	Fax Engine bus interface	Memory controller/arbitrator	Overall data conversion controller

- Main functional block  
○ Relevant functional block

Table 1. Correlation of ASIC functions and functional blocks

### 1) Overall data conversion controller

It controls a data flow of the overall ASIC. When data is stored in the 203.2 dpi data buffer, the controller activates the main scanning direction resolution conversion circuit of the subsequent stage, etc. and stores the data in the main scan 600 dpi data buffer. Then activates the sub scanning direction resolution switcher circuit and stores the converted data in the sub scan 600 dpi data buffer. When the data of more than 208 lines is ready for print head vertical direction, triggers are sent to the swath conversion circuit and the ESC command adding circuit.

### 2) Serial data receiving circuit

This circuit receives serial printing data from Fax Engine and stores them in the 203 dpi data buffer. Data PDAT is received via an 8-bit shift register when PCLK starts up. The circuit writes the data on the buffer every 8 dots (1 byte).

The input amount per line is fixed to 216 bytes (1728 dots). The upper limit of the serial transfer frequency is set to 3.3 MHz. Equipped with the following functions to realize main scanning direction centering.

- Received data destruction  
This function does not receive (invalidates) the data printed on both margins, unnecessary for centering, and only accepts valid data. The number of dots to invalidate depends on the conversion rate of resolution.  
If the number is less than 0, data will not be invalidated and white dots will be inserted instead.
- Interpolation of blank data (8 dots or less) on both margins  
Blank data of a byte (8 dots) are inserted in the after-mentioned blank data interpolation circuit. Blank data of less than 1 byte are inserted in the main block.  
The per-line-data to be written on the 203.2 dpi data buffer should be 218 bytes at the maximum.

### 3) 203 dpi data buffer (FIFO controller)

It occupies 96 kB of DRAM memory as a serial data receiving buffer. The buffer mounts an address counter as part of FIFO mechanism. Equipped with a judging circuit to indicate the FIFO status either as FULL, Near FULL or EMPTY.

### 4) Main scanning direction resolution conversion circuit

This circuit reads raster data from the 203 dpi data buffer and changes the resolution by the dot. The converted data will be stored in the main scan 600 dpi data buffer one by one.

After converting 4800 dots (600 bytes) in the main scanning direction, end-of-line pulse will be sent.

Equipped with the following functions to realize main scanning direction centering.

- Interpolation of 8-dot (byte) blank data  
This function inserts blank data on both ends of the line for main scanning direction centering. It depends on the conversion rate of resolution.  
If the number of dots is less than 0, blank data will not be interpolated. The blank data of less than 8 dots will be inserted in the aforementioned "serial data receiving circuit". The main block accepts the insertion of byte size (8-dot) blank data.

### 5) Main scan 600 dpi data buffer (FIFO controller)

It makes up the buffer with a FIFO mechanism. Though it carries out the same pointer control as the 203 dpi data buffer, The data byte per line is fixed to 600.

The Read channel should be connected to the sub scanning direction resolution conversion circuit.

#### **6) Sub scanning direction resolution conversion circuit**

It reads 1 byte (8 dots in the main scanning direction) of data in the main scan 600 dpi data buffer, converts the resolution in the sub scanning direction, and stores the data in the sub scan 600 dpi data buffer. Then it repeats this operation every 8 dots until reaching the end of line. It further converts the data for 208 lines and sends out the completion pulse when finished.

In the sub scanning direction, the input data per line may increase up to 13 lines and go over the swath. To simplify circuit configuration, apply the same conversion method to after the 208th line and continue conversion up to 220 lines. The lines 209th and over should be handled as the next swath data.

#### **7) Sub scan 600 dpi data buffer (buffer controller)**

It performs pointer management to use the DRAM as a buffer for 440 lines (208 + 12 lines x 2).

The buffer cannot be cleared until swath data conversion (printing command output) is complete as it reads data in the line direction. To avoid degraded performance, this buffer should have a capacity for 2 sets of swath data. The buffer should store 220 lines per swath due to the configuration of the sub scanning direction resolution conversion circuit.

#### **8) Printing dot counting circuit/print duty judging circuit**

It monitors the output data from the sub scanning direction resolution conversion circuit and counts the number of black dots. When counting of a swath (208 lines) is finished, it sends the result to the ESC command adding circuit to reflect it on the ESC command parameter.

To judge whether or not the print density of every inch (600 dots) in the main scanning direction surpasses 50%, it counts the dots in 8 areas (for 8 inches) every 75 bytes (600 dpi x 1 inch/8) after the line start. If the print duty in any area surpasses 50%, the circuit notifies split printing to the swath data conversion circuit. It further separates and counts odd- and even-numbered slices in each area in order to clarify the number of dots for split printing. When dots in all areas for a swath are counted, odd- and even-numbered slices are totaled.

When the counting for a swath is finished, if both slices total 0, it notifies the ESC command adding circuit to activate white skip operation and clears the sub scan 600 dpi data buffer.

#### **9) Swath data conversion circuit**

This circuit reads data by 1-bit increments from the discrete address of the sub scan 600 dpi data buffer and converts them into data of a slice. When split printing is instructed from the printing dot calculation circuit, it converts even-numbered slices for the first time. When conversion completes, it creates odd-numbered slices without clearing the sub scan 600 dpi data buffer.

#### **10) ESC command adding circuit**

It adds a command line and a parameter to the printing data when a print command is sent. Then sends a paper feed command for white skip and a paper deliver command for after a single page printing.

#### **11) IEEE1284 controller**

It sends commands to, receives responses from and sends printing commands and data to IEEE1284 interface of Hurricane.

#### **12) Command buffer**

It provides a buffer of 64 bytes to send commands from Fax Engine to the printer (Hurricane). The actual buffer is located in the DRAM to keep down the number of gates.

Therefore, equipped with a data path to the memory access arbiter and an address controller to realize the buffer.

#### **13) Response buffer**

It provides a buffer of 1024 bytes to receive responses from the printer (Hurricane) to Fax Engine. The actual buffer is located in the DRAM as with the command buffer.

Also equipped with a data path to the memory access arbiter and an address controller to realize the buffer.

#### **14) FaxEngine bus interface**

It functions as a bridge connecting the external bus of Fax Engine-LSI and the internal bus of this ASIC. It operates at 1 wait except for the accesses by the command or response buffer. As these two buffer accesses via the arbiter, the external wait will be generated by the RDY signal.

#### **15) Interruptive controller**

It collects causes of interruption that occurs in the ASIC and generates interruptive signals when interruption of Fax Engine firmware is prohibited. It clears or retains interruption factors.

#### **16) Memory access arbiter**

It adjusts memory accesses from buffers. It possesses 9 access channels.

The arbitration logic needs to be devised in order to secure the data transmission rate.

#### **17) DRAM controller**

It accesses memory using read cycle, early write cycle and CAS-before-RAS refresh cycle of MSM51V4800E-70 [OKI] of 4Mbit Fast Page DRAM.

## [3] Circuit description of TEL/LIU PWB

### (1) TEL/LIU block operational description

#### 1) Block diagram

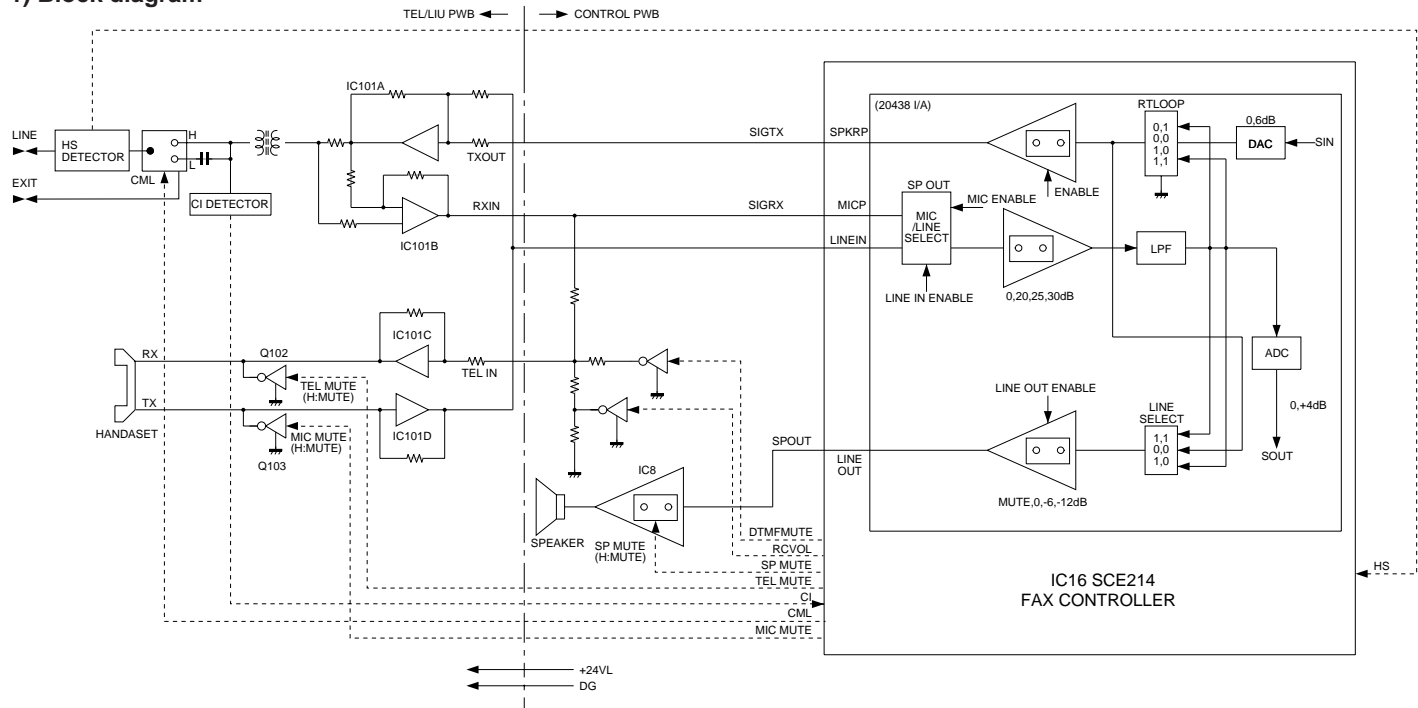

Fig. 6

#### 2) Circuit description

The TEL/LIU PWB is composed of the following 7 blocks.

1. Speech circuit section
2. Dial transmission section
3. Speaker amplifier section
4. Ringer circuit section
5. CI detection circuit
6. Signal/DTMF transmission level & receiving level
7. External phone off-hook detection (HS) section

#### 3) Block description

##### 1. Speech circuit section

- The receiver volume is an electronic volume type, this model is switched in 3 steps.

##### 2. Dial transmission section

- D.P. transmission: The CML relay is turned on and off for control in the DP calling system. (Refer to the attached sheet.)
- DTMF transmission: It is formed in the modem, and is output.

##### 3. Speaker amplifier section

- Ringer volume :It is controlled by the combination of the attenuator value of the LINE DRIVER in the modem and the ringer sending level sent from the modem.
- Speaker volume :It is controlled by the attenuator value of the LINE DRIVER in the modem.

##### 4. Ringer circuit section

- The ringer sound is formed in the tone of modem when CI signal is detected. The amplifier circuit drives the speaker of the main body.

##### 5. CI detection circuit

- CI is detected by the photo coupler which is integrated in series in the primary side TEL circuit well proven in the existing unit.

##### 6. Signal/DTMF transmission level & receiving level

- Signal transmission level setting: ATT -8 dB Circuit output: -11.5 dBm.
  - DTMF transmission level setting: HF -2.5 dBm LF -4.0 dBm
- Thus, set the level.

#### 7. External phone off-hook detection (HS) section

Line current detection will be switched to ON (LOW) when the main unit or the external phone is off the hook. When the HS signal is turned on at CML OFF, the external phone is considered to be off the hook and, at CML ON, the HS signal is constantly turned on (if connected).

#### 4) Signal selection

The following signals are used to control the transmission line of TEL/FAX signal. For details, refer to the signal selector matrix table.

[Control signals from output port]

Signal Name	Description															
CML (The circuit is located in the TEL/LIU PWB.)	<u>Line connecting relay and DP generating relay</u> H: Line make L: Line break															
SP MUTE (The circuit is located in the control PWB.)	<u>Speaker tone mute control signal</u> H: Muting (Power down mode) L: Muting cancel (Normal operation)															
TELMUTE	<u>Handset reception mute control signal</u> H: Muting L: Muting cancel															
RCVOL DTMFMUTE (The circuit is located in the control PWB.)	<u>Handset receiver volume control signal</u> <table><tr><th>Volume</th><th>High</th><th>Middle</th><th>Low</th><th>DTMF sending</th></tr><tr><td>RCVOL</td><td>L</td><td>H</td><td>H</td><td>H</td></tr><tr><td>DTMFMUTE</td><td>L</td><td>L</td><td>H</td><td>H</td></tr></table> <p>Note: The DTMF sending listed above is DTMF signal sending in the handset OFF-HOOK mode.</p>	Volume	High	Middle	Low	DTMF sending	RCVOL	L	H	H	H	DTMFMUTE	L	L	H	H
Volume	High	Middle	Low	DTMF sending												
RCVOL	L	H	H	H												
DTMFMUTE	L	L	H	H												

VOLUME SETTING		LINEOUT A		RCVOL	DTME MUTE
		(HIGH)	(LOW)		
Receiver volume setting	Low			1	1
	High			0	0
	Middle			1	0
DTMF Transmission volume setting (Receiver)	Fixed			1	1
Key buzzer volume setting	Fixed				
Speaker volume setting	Low	1	1		
	Middle	1	0		
	High	0	1		
Ringer volume setting	Low	1	1		
	Middle	1	0		
	High	0	1		
DTMF speaker volume setting	Low	1	1		
	Middle	1	0		
	High	0	1		

[Other signals]

Signal Name	Function
TEL IN	Receiving signal from line or modem
SPOUT	Speaker output signal
TXOUT	Transmission (DTMF) analog signal output from modem
RXIN	Reception (DTMF, others) analog signal input into modem

NO	Signal Name (CNLIUA)	NO	Signal Name (CNLIUA)
1	+24V	7	TELOUT
2	DG	8	TXOUT
3	MICMUTE	9	CML
4	TELIN	10	CI
5	TELMUTE	11	HS-
6	RXIN	12	RHS-

[Signals for status recognition according to input signals]

Signal Name	Function
$\overline{\text{RHS}}$	H: The handset is in the on-hook state. L: The handset is in the off-hook state.
CI	Incoming call (CI) detection signal
$\overline{\text{HS}}$	H: The handset and external telephone is in the on-hook state. L: The handset and external telephone is in the off-hook state.

(Example: SENDING/RECEIVING)

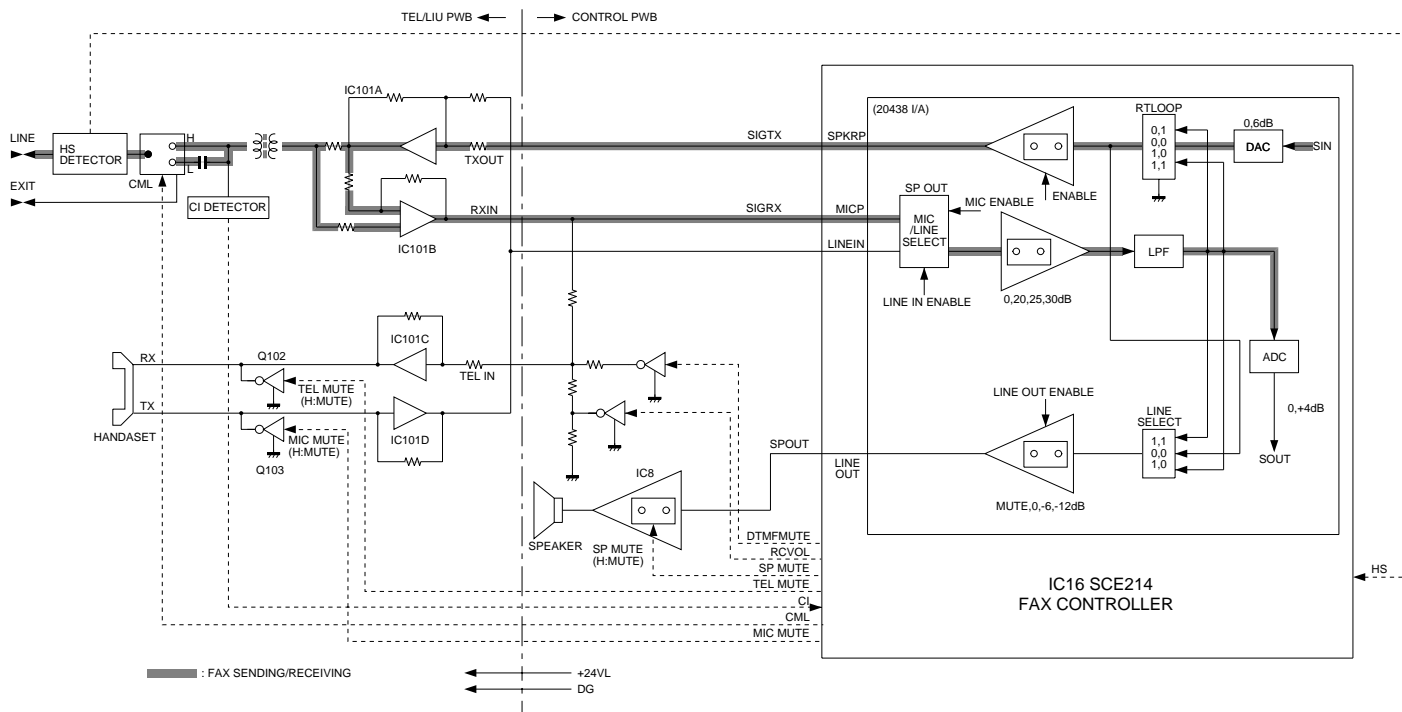

Fig. 8

## [4] Circuit description of Printer PWB

### 1. Block diagram

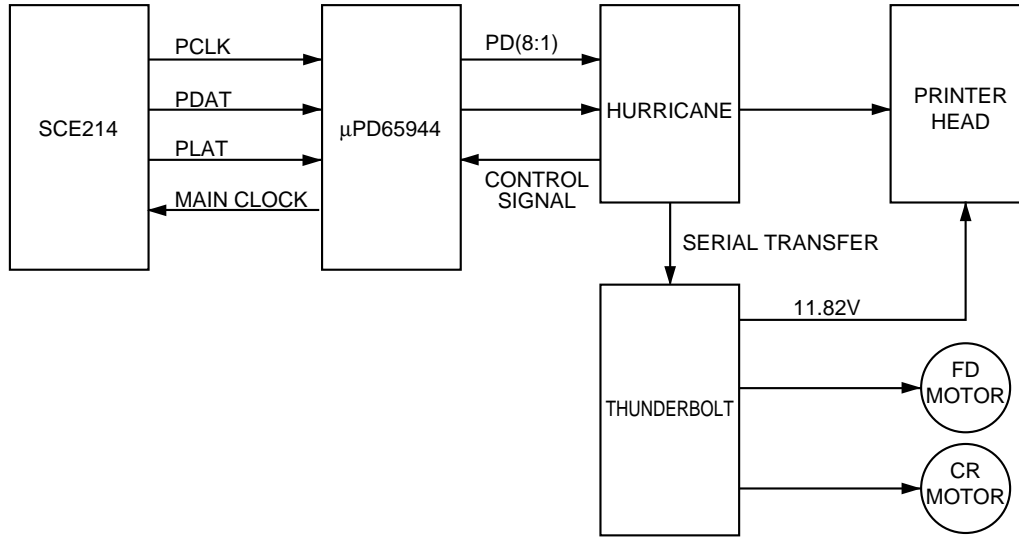

Fig. 8

### 2. Circuit description

The printer control unit consists of a printer controller ASIC (IC1:Hurricane), printer controller CPU bus connection ASIC(With control PWB), and analog ASIC(IC3: Thunderbolt) with a built-in motor driver and head voltage generating circuit.

#### 1) Hurricane(IC1): (RH-IX2314XHZZ)

This is ASIC where CPU(ARM7) of 32-bit RISC works as its core and peripheral features are integrated. It is also equipped with the firmware ROM, buffer ROM, and IEEE1284 parallel port interface. Data communication with the main controller is performed via Alcore ASIC. Data from Alcore ASIC is transferred to the controller in the compatible mode or ECP mode of IEEE1284, and the controller sends the status of the printer in the nibble mode. The operating frequency is 24 MHz.

#### 2) Thunderbolt(IC3): pin-44 PLCC(VHIPC901054-1)

Motor drivers of the FD and CR motors, and head voltage(11.82V) generating regulator of the printer carriage are integrated into this analog ASIC. Each motor control register is set by the one-way synchronous serial transfer via the printer controller, Hurricane.

# Hurricane (IC1) Terminal descriptions

## Hurricane BLOCK DIAGRAM

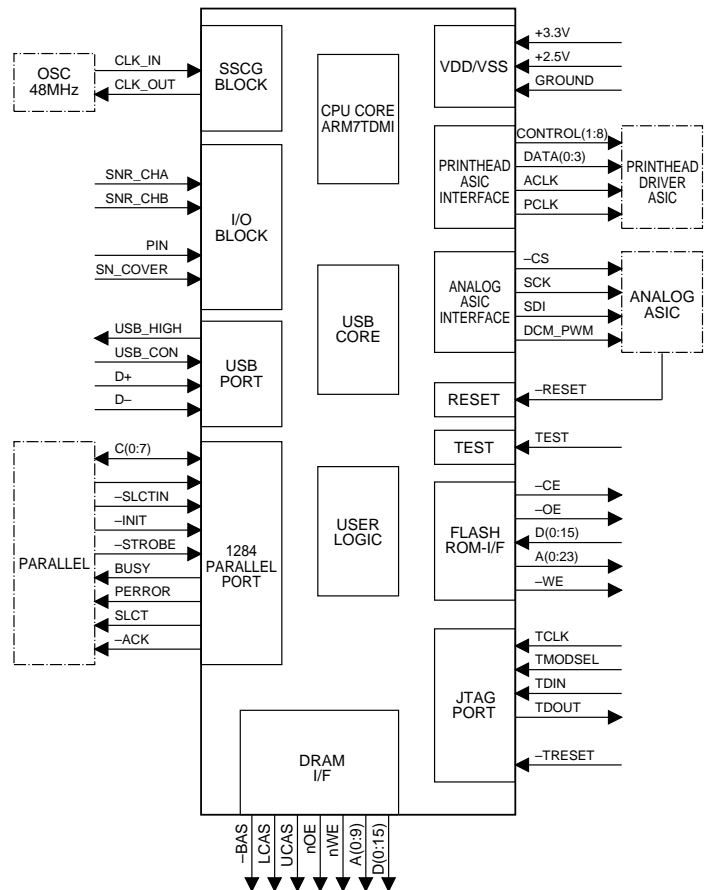

Fig. 9

## [5] Circuit description of power supply PWB

### 1. Block diagram

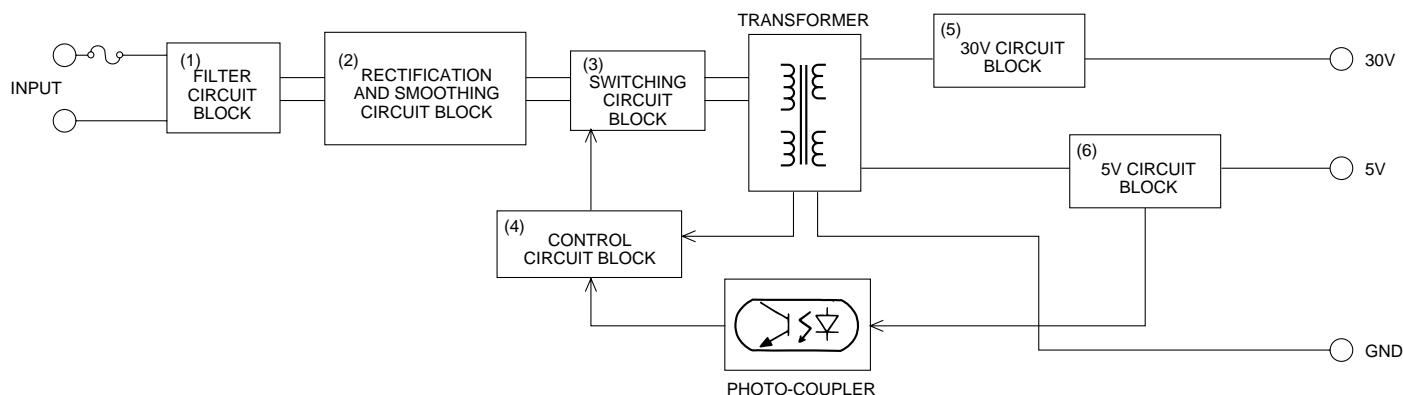

Fig. 10

This power supply unit has the function to convert the A110-120V(50/60Hz) to DC5V, and provide these outputs to the equipment. The following explains the function of each block.

#### 2-1. Filter circuit block

This circuit reduces the outgoing noise through the input lines which is generated in the power supply unit, and prevents the invasion of the noise from the lines. (the excessive surge such as the thunder is prevented by the varistor(Z1).)

#### 2-2. Rectification and smoothing circuit block

This circuit rectifies and smoothes the AC input, and provides the DC voltage to the switching circuit block.

#### 2-3. Switching circuit block

This circuit converts the DC voltage(provided from the Rectification and smoothing circuit block) to the high-frequency pulse voltage by FET(Q1)'s switching (on/off repeat), and provides the energy to the transformer(T1). It discharges the energy(charged during the FET ON time) to the secondary side during the FET OFF time through the secondary windings. The output voltages on the secondary side provided by the energy depend on the ratio of the winding turns (primary : secondary) etc.

#### 2-4. Control circuit block

This circuit block controls the output voltage by transmitting the detected 5V voltage to the primary control circuit through the photo-coupler(PC1). In case of the over-current, this circuit reduces providing the energy to the transformer. In case of the over-voltage, this circuit reduces providing the energy to the transformer by letting the Power-Zener(D104; connected between the 30V output voltage and GND) into the short mode and letting the over-current protection circuit work.

#### 2-5. 30V output circuit block

This circuit block rectifies and smoothes the high-frequency pulse voltage provided by the transformer, and provides the DC 30V output to the equipment.

#### 2-6. 5V output circuit block

This circuit block rectifies and smoothes the high-frequency pulse voltage provided by the transformer, and provides the DC 5V output to the equipment. The output voltage is adjusted by the variable resistor(VR101).

## [6] Circuit description of CIS unit

### 1. CIS

Cis is an image sensor which puts the original paper in close contact with the full-size sensor for scanning, being a monochromatic type with the pixel number of 1,728 dots and the main scanning density of 8 dots/mm.

It is composed of sensor, rod lens, LED light source, light-conductive plate, control circuit and so on, and the reading line and focus are previously adjusted as the unit.

Due to the full-size sensor, the focus distance is so short that the set is changed from the light weight type to the compact type.

### 2. Waveforms

The following clock is supplied from SCE214 of the control board, and VO is output.

## 2. Description

### 2-1. Control PWB CHK

Install the extension PWB X3312 in the main unit. (Replace X3308.)

## 2-2. Printer PWB CHK

Install the extension PWB X3318 in the main unit. (Replace X3346.)

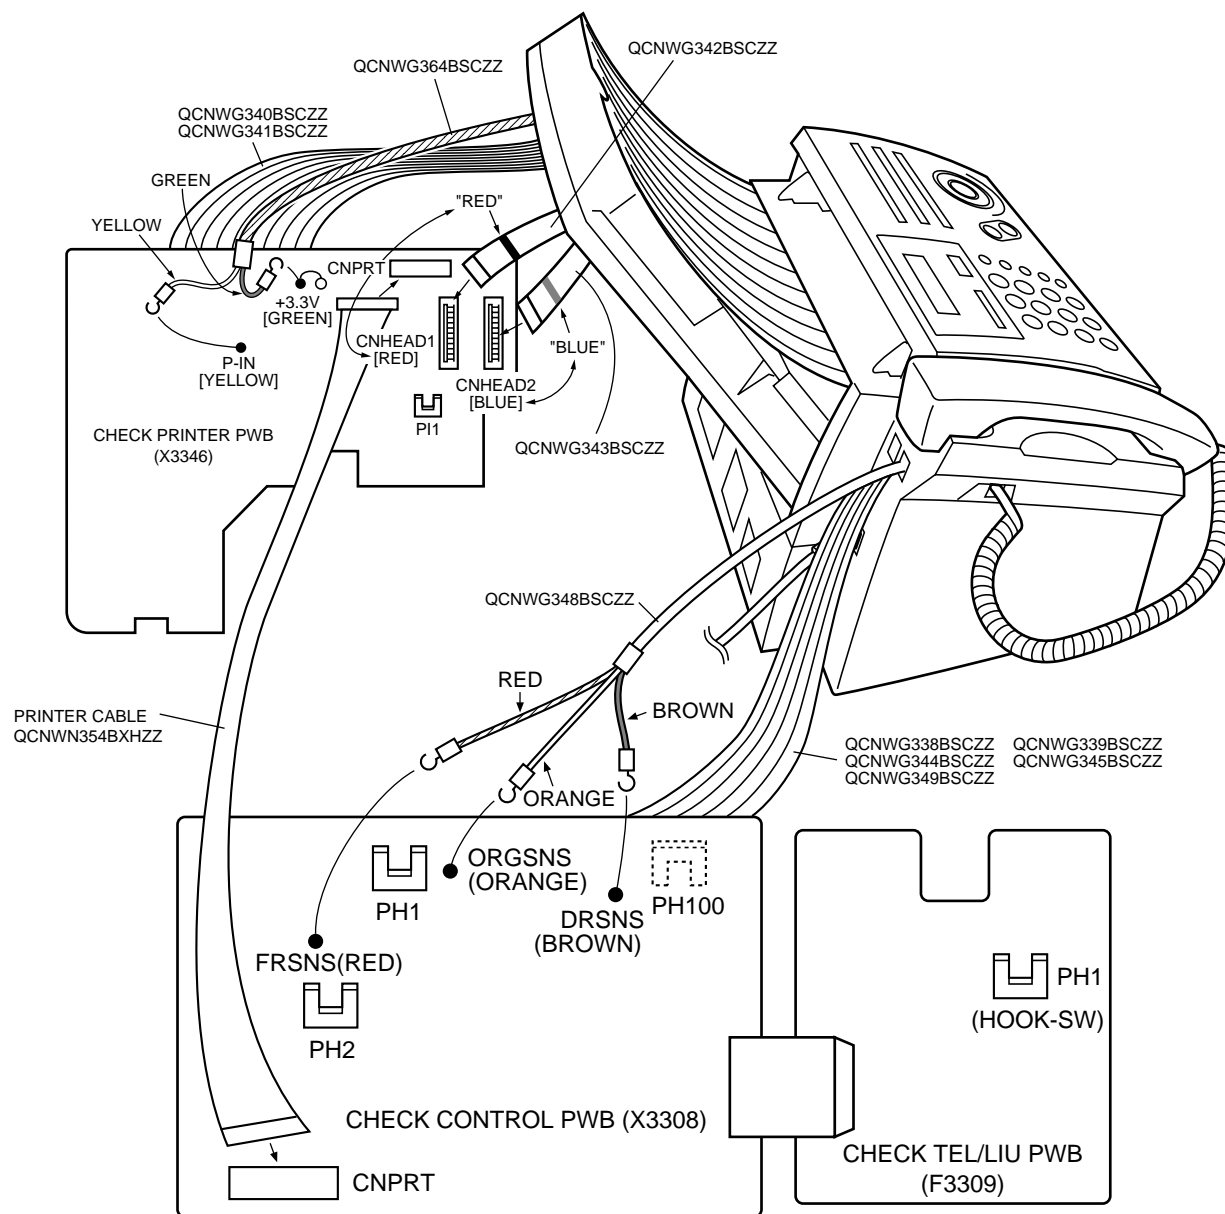

## 2-3. Simultaneous CHK on Control PWB and Printer PWB

- Install the extension PWB X3312 in the main unit. (Replace X3308.)
- Install the extension PWB X3318 in the main unit. (Replace X3346.)

### Notes:

Be sure to follow the notes in "2-2. Printer PWB CHK".

\* Block the groove in each PH,PI like . Hook-SW (PH1 of TEL/LIU F3309) should be turned on/off manually.

2-4. Shading paper

The white and black basis is applied to remember the shading waveform. Be sure to perform this operation when replacing the battery or replacing the control PWB. Execute in the shading mode of DIAG mode.

[2] Changing the record paper size

How to change the A4 size and letter size of the record papers

- 1) It becomes the record paper of the A4 size by installing A4 guide (PGiDM2493AXSA) which shows in the drawing. Remove A4 guide when you use the record paper of the letter size.

- 2) Set soft switch SW-L2 No.1 and the initialization of SW-L2 No.2 as follows.

SW NO.	DATA NO.	ITEM	Switch setting and function				Initial setting	Remarks
			1		0			
SW I L2	1	Paper set size		LETTER	LEGAL	A4	0	OPTION
	No. 1		0	0	1			
	2		No. 2	0	1	0		

### [3] Rewriting version up the FLASH ROM

TYPE1: FAX ENGINE FLASH ROM

TYPE2: PRINTER ENGINE FLASH ROM

#### Step 1 File setting①

Execute "FAX\_LOADER.EXE" and extract the compressed file.

File contents:

```

¥FAX_LOADER¥ -----¥CMD¥----- Atl0.cmd
                |               |
                |               |
                |-----¥CONFIG¥----- FAX_DOWNLOAD.txt
                |               |
                |               |
                |-----¥DATA¥----- ¥FAX¥
  
```

#### Step 2 File setting②

TYPE1: FAX ENGINE FLASH ROM

Copy the downloaded file (¥.VER) to ¥FAX\_LOADER¥DATA¥FAX¥ in the default directory (given directory).

TYPE2: PRINTER ENGINE FLASH ROM

Copy the downloaded file (¥.ESC) to ¥FAX\_LOADER¥DATA¥FAX¥ in the default directory (given directory).

#### Step 3 Flash rewriting

Description for application is detailed in the attached document below.

- Rewriting the flash for the FAX or PRINTER engine (with software (Tera Term) for the PC)

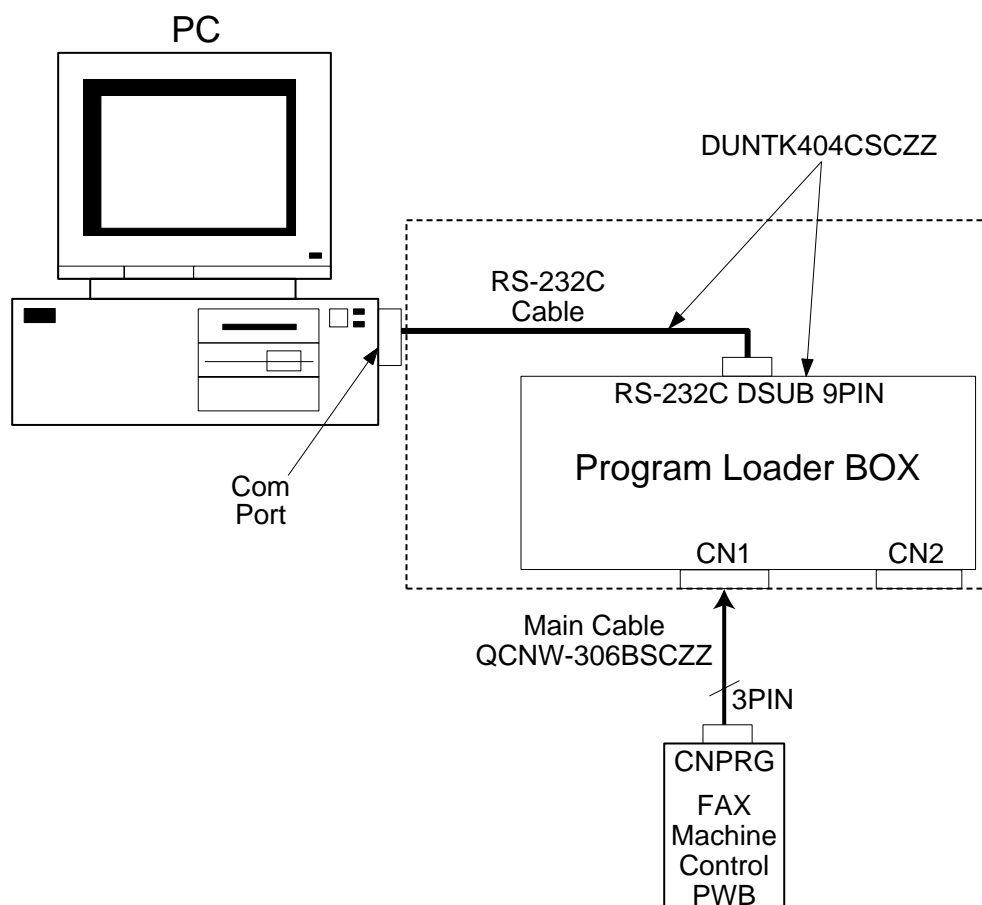

Fig. 1. Connected chart

PART CORD	PRICE RANK	NAME	REMARKS
DUNTK404CSCZZ	DG	Program loader BOX	Includes RS-232C cable
QCNW-306BSCZZ	BF	Main cable	Connects Program loader BOX and FAX machine.

Table 1. Program loader unit

Fig. 2. Program loader BOX

	① Before connecting the PC and Program loader BOX with RS-232C cable.	② After connecting the PC and Program loader BOX with RS-232C cable. (1*)	③ Power supply to the FAX machine.	④ Connect Program loader BOX and the Control PWB of the FAX machine (CNPRG) with Main cable. (3*)
FAX PWB rewriting	Set the switches of Program loader BOX as follows. (a) MAIN SW OFF (down) (b) CALIBRATION OFF (down) (c) BATSW OFF (down) (d) PARK SW OFF (down) (e) IC Voltage to 3.3V (down) (f) MODE to DOWNLOAD (down)	Set the switch of Program loader BOX as follows. (g) MAIN SW ON (up)	Plug the power cable of the FAX machine to the outlet. (2* TYPE1: FAX ENGINE FLASH ROM Only.)	---

Table 2. Program loader BOX connection procedures

- 1\*: Connect one end of RS-232C cable to the COM port of the PC and the other end to RS-232C DSUB 9PIN of Program loader BOX.
- 2\*(TYPE1:FAX ENGINE FLASH ROM Only.) :
- Press and hold down the keys 1 simultaneously while turning on the FAX machine and until "DOWNLOAD MODE" appears.
- 3\*: Perform the procedure ③ before ④. (Turn on the Program loader BOX and the FAX machine before connecting Main cable and the FAX machine.)
- Connect one end of Main cable to the connector of the Control PWB connector for the FAX machine (CNPRG) (refer to Fig. 3), and the other end to CN1 of Program loader BOX.

Fig. 3. Connection of Main cable

## Using software for the PC (Tera Term)

Uncompress the compressed file of TeraTerm.

Execute the "SETUP.EXE" from compressed files to install TeraTerm.

Execute the "ttermpro.exe" to start Tera Term.

### 1. Select "New connection" from the pull-down menu of "File".

① Check "Serial".

② Select the port number in which the RS-232C cable is connected to.

③ Click "OK" for confirmation.

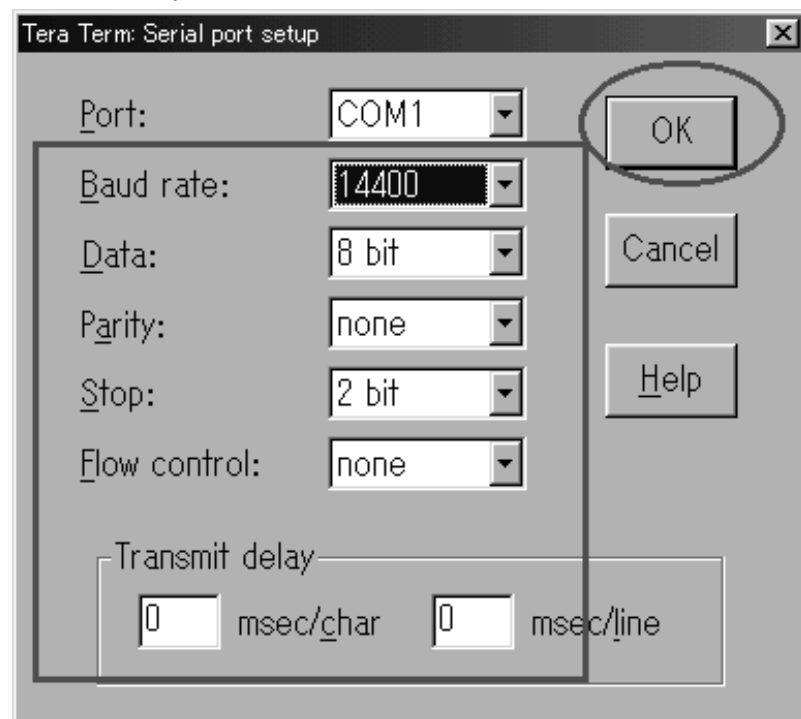

↓  
Proceed to 2.

2. Select “Serial port” from the pull-down menu of “Setup”.

Select the port number which the RS-232C cable is connected to.  
Set the other parameters as follows and click “OK” for confirmation.

Proceed to 3.

### 3. Perform procedures described in Table 3.

	① Before connecting the PC and Program loader BOX with RS-232C cable.	② After connecting the PC and Program loader BOX with RS-232C cable. (1*)	③ Power supply to the FAX machine.	④ Connect Program loader BOX and the Control PWB of the FAX machine (CNPRG) with Main Cable. (3*)
FAX PWB rewriting	Set the switches of Program loader BOX as follows. (a) MAIN SW OFF (down) (b) CALIBRATION OFF (down) (c) BATSW OFF (down) (d) PARK SW OFF (down) (e) IC Voltage to 3.3V (down) (f) MODE to DOWNLOAD (down)	Set the switch of Program loader BOX as follows. (g) MAIN SW ON (up)	Plug the power cable of the FAX machine to the outlet. (2* TYPE1: FAX ENGINE FLASH ROM Only.)	---

Table 3. Program loader BOX connection procedures

1\*: Connect one end of RS-232C cable to the COM port of the PC and the other end to RS-232C DSUB 9PIN of Program loader BOX.

2\*(TYPE1: FAX ENGINE FLASH ROM Only):

Press and hold down the keys 1 simultaneously while turning on the FAX machine and until "DOWNLOAD MODE" appears.

3\*: Perform the procedure ③ before ④. (Turn on the Program loader BOX and the FAX machine before connecting Main cable and the FAX machine.)

Connect one end of Main cable to the connector of the Control PWB connector for the FAX machine (CNPRG) (refer to Fig. 3), and the other end to CN1 of Program loader BOX.

#### TYPE2: PRINTER ENGINE FLASH ROM

After performing procedures described in Table 3, confirm the LCD is data & time and press FUNCTION 9 \* 8 # 6 START ▲▲▲, "PRINTER DOWNLOAD" appears on the LCD.  
And press down the START key, "DOWNLOADING WT" appears on the LCD.

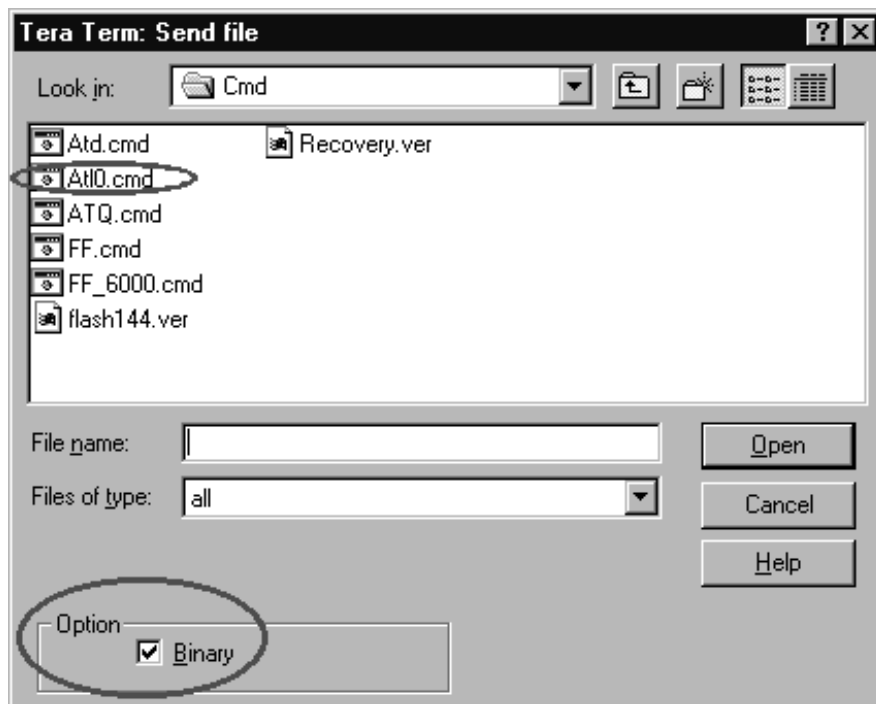

Proceed to 4.

4. Select “Send file” from the pull-down menu of “File”.

Enable the Binary in “Option” and open “AtI0. cmd”.

Proceed to 5.

5.

If the description above does not appear, return to 4.

If the description above appears, proceed to 6.

6. Select “Send file” from the pull-down menu of “File”.

TYPE1: FAX ENGINE FLASH ROM

Enable the Binary in “Option” and open “ta $\times$ .ver”.

TYPE2: PRINTER ENGINE FLASH ROM

Enable the Binary in “Option” and open “ta $\times$ .ESC”.

(Select a file you want to download here.)

Proceed to 7.

7.

If the description above appears, return to 4.

If the description above appears, downloading was completed normally.

↓  
Proceed to 8.

- 8.
- 1. To go on to download FLASH ROM, perform the following procedures.
    - 1-1. Only perform procedures ① and ② described in Table 4.
    - 1-2. Return to 3.
  
  - 2. To complete downloading FLASH ROM, perform the following procedures.
    - 2-1. Perform procedures ① through ③ described in Table 4.
    - 2-2. Terminate “Tera Term”.

**Table 4. Termination procedures (1\*)**

	① Remove the connector from the Control PWB (CNPRG) of the FAX machine.	② Turn off the FAX machine.	③ Turn off the Program loader BOX.
FAX PWB rewriting	---	Turn off the FAX machine.	Set the switch of Program loader BOX as follows. (a) MAIN SW OFF (down)

1\*. Perform procedures ① through ③ in numerical order.
